

# chqoit

Where real-world **utility** meets **blockchain** technology

# Our **Vision**

- 1** Create a bridge between the traditional financial system and the crypto world
- 2** Focus on users without blockchain education through an easy and accessible interface
- 3** Fair market. Low fees and equality for users
- 4** Presence in Argentina with rapid global expansion focusing on Latin America

# Our Mission

Provide effective and secure solutions that allow entrepreneurs, investors, and fintech consumers to access an ecosystem that promotes legality and the reality of the crypto world.

With both an online and a physical presence, we are positioned to serve our clients in Argentina and Latin America, adapting to their specific and evolving needs.

# Our Origins

- 1** Born from the need to create a simple platform designed for real adoption, where users feel comfortable and can operate without advanced knowledge
- 2** With a team of 14 passionate experts in fintech, we designed products and services that take traditional services to the next level using blockchain technology
- 3** From creating our own blockchain to developing the Chabit wallet, payment gateway, or ticketing system, every aspect of our business has been conceived to provide solutions aligned with current and future market demands

# Competitive **Advantages**

**Adaptability**  
To the market

**Alliances**  
Strategic

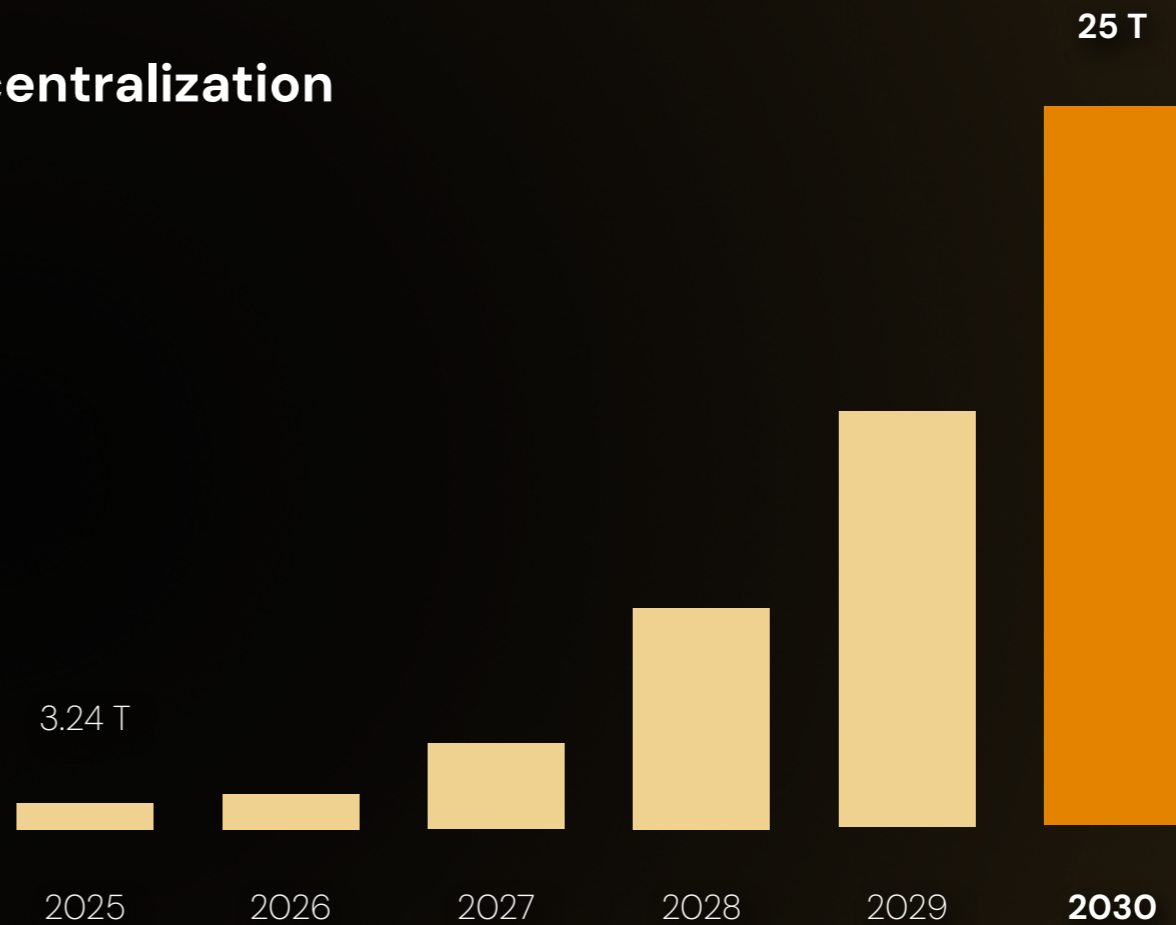

**Security &**  
Efficiency

**Focus on**  
User experience

# Industry Analysis

- 1 Unification of centralization and decentralization
- 2 Growing adoption
- 3 Evolving legality
- 4 Global crypto context

Punto de venta  
6.03 billions of dollars

Exchange  
16 billions of dollars

Ticketing  
23.16 billions of dollars

# Market Trends

**1** Cryptocurrency adoption

**2** Ongoing regulation

**3** Blockchain evolution

**4** Financial education

# Analisis **SWOT**

## **1** Strengths

- Adaptable solution between fiat and crypto
- Strategic alliances with key players
- Secure and efficient platform
- Strong focus on innovation
- Unification of decentralization and centralization
- Unique interface and user experience

## **2** Weaknesses

- Small team
- Limited budget

## **3** Opportunities

- Growing global crypto adoption
- Favorable regulation in Argentina
- High demand for mixed solutions
- Easy potential for international expansion
- Lack of real adoption solutions

## **4** Threats

- Increasing competition
- Crypto market volatility

# Objetives

## Short Term

- Growth in active users
- Strategic partnerships
- Education of new users
- Evolution of blockchain experience
- Establishing brand values

## Medium Term

- Expansion of product offering
- Achieve target market share
- Retain users with loyalty
- Expand brand recognition
- Start global expansion

## Long Term

- Leaders in crypto solutions in LATAM
- Surpass \$200M annual revenue
- Complete product offering
- Full presence in America and Europe
- Development of new products under Chabit trademark

# Our blockchain

## CBCChain

# The Evolution of Blockchain with Chabit

With our own Layer 1 blockchain, called **CBChain**, we have achieved a new level of performance. Its superior speed (over 100,000 real transactions per second, scalable to millions), validation time (less than 3 seconds), and security (post-quantum encryption system) make it the blockchain that will revolutionize the crypto world.

In the chart on the right, we highlight the main features of CBChain compared to the most important current blockchains and technologies, giving us a clearer perspective on the change and progress that Chabit represents.

## Bitcoin

- 7 transactions per second
- Validation times ranging from 10 minutes to several hours and high fees
- High congestion due to limited scalability
- Security with non-quantum

## Ethereum

- 10-15 transactions per second
- 15 seconds to several minutes with high fees
- High congestion due to poor scalability
- Security with non-quantum

## CBChain

- 100.000 to millions of transactions per second
- 3 seconds and low fees
- Highly scalable performance thanks to new technology
- Security with post-quantum encryption

## Solana

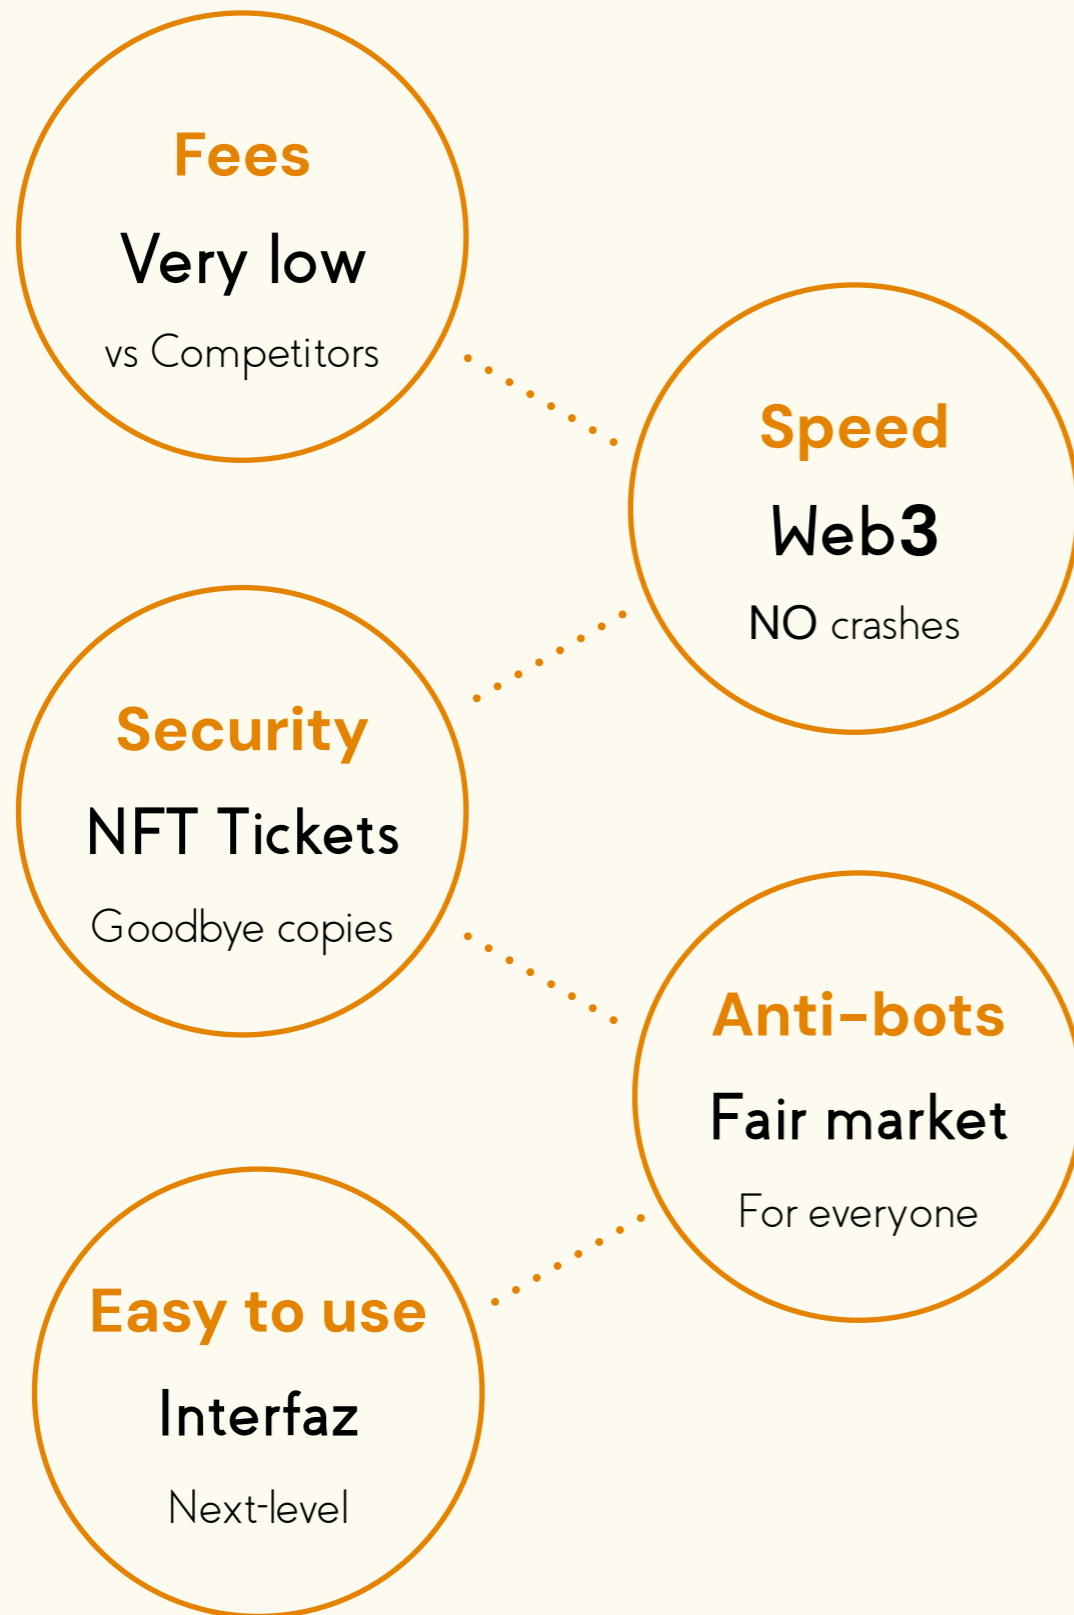

- 65.000 transactions per second
- 10-second transaction times and low fees
- Better performance but prone to congestion due to its architecture
- Security with post-quantum encryption

## XRP

- 1.500 transactions per second
- 3-second validation time
- Good performance
- Security with post-quantum encryption

# Our ticketing system

## Chabit Pulse

# Problems? **Solved**

## What do we need to fix?

### **Security and Fraud**

The current system of sending tickets via email with QR codes offers very little security; it is also cumbersome and impractical. Furthermore, tickets are often counterfeited, resulting in significant financial losses for users and damaging the reputation of event organizers

### **User Experience**

Event organizers lack the automation and tools needed to host events easily, quickly, and efficiently

### **Outdated technology**

Web 2.0 technology causes constant problems such as crashes, transaction failures, or pages failing to load, leading to user frustration

## Our solution

### **Tickets Using NFT Technology**

The use of smart contracts to create tickets provides unparalleled security; they cannot be duplicated or counterfeited, so users can always feel confident and secure when purchasing tickets. Additionally, Chabit verifies the ticket's authenticity and notifies the user whether it is genuine or not

### **ALL-IN-1 App**

With Chabit, managing and creating events takes just minutes. The entire system is designed to make life easier for event organizers, offering a simple and secure process from start to finish

### **A Natural Evolution**

With CBChain, we're taking payment processing to new heights—hundreds of thousands of transactions per second ensure a seamless and instant experience, easy

# Problems? **Solved**

## What do we need to fix?

### **Cumbersome interface**

The ticket-buying process itself is confusing, cluttered, and inefficient. Furthermore, ticket-selling websites often display too much information that is irrelevant to the user, resulting in an experience that is poorly tailored to what each user is looking for

### **Sky-high fees**

Ticket sales through today's major ticketing platforms have become a financial challenge; fees of up to 20% leave promoters and artists with too little profit margin and unnecessarily drive up ticket prices for consumers

### **Abusive reselling**

At major events, users with bots snap up a large portion of the tickets so they can instantly resell them at a higher price, causing significant harm to other users who are forced to pay much more

## Our solution

### **A Revolutionary User Interface**

Ticket purchasing takes it to the next level with Chabit Pulse. Users will feel comfortable and guided, knowing exactly where they are and what they're buying at all times. Plus, we've removed all irrelevant information—if a user is a rock fan, they want to see rock, not jazz. Thank you

### **More isn't better; better is better**

Using our own blockchain, combined with the efficiency of our system, results in fees that are up to five times lower—meaning more money for the developer and lower costs for the user. Better is better, period

### **Bye, bye**

With Chabit Pulse, we can say goodbye to these harmful users. Our technology prevents the use of bots, and our controlled resale system prevents short-term profiteering—tickets are for the fans

# Why **chabit**<sup>8</sup>?

Our goal is simple: to address the market with solutions that truly change the user's final experience and their interaction with technology. Our foundation is offering just enough, without excess, but very polished and optimized to achieve the **balance between simplicity and power**

*"More is not better, better is better"*

**One last question remains  
... are you in?**

chabit<sup>8</sup>

**Thanks!**
