Descripción de

chabit

"**Chabit** is a crypto platform and exchange whose functionality is to provide its users with a simple and guided interface, taking blockchain technology adoption to the next level, making its usage a daily habit by integrating cutting-edge technology and real-world applications."

Development PHASES

*"It's not about the ideas.
But about making them become a reality."*

Fases

de desarrollo

1. Release
2. Expansion
3. Development
4. Utility
5. Conquest

1

Release

- Initial phase of the project

- **CB8** token launch

The core of our project

- **Initial community:**

Focus on community unity, transparency, and constant communication, a project by people for people

- **Social media creation**

- **Listing on the first exchange**

2

Expansion

- Sale of shares **chabit**

Through NFT technology

- Community growth

Focus on the Hispanic community, we must establish the foundations with the users who will benefit the most from using the services that Chabit will provide

- Exchange listings

We will seek price stability and CB8's growth by generating significant trading volume through exchange listings and extensive marketing

3

Development

- **Development of Chabit and ChAI**

We will commence the development of the platform and AI, releasing a Beta version with reduced functionalities to begin providing real utility for CB8

- **Development of ChaNET**

We will initiate the creation of our own layer upon which CB8 and all Chabit services will run

- **Multichain Migration**

CB8 will transition to becoming a token capable of operating on major cryptocurrency networks

4 Utility

- **Chabit Launch**

At this stage, the platform and its technology will be available at 100%, including ChAI and ChaNET

- **Real-World Utility**

Services will be provided for businesses, merchants, and individuals with a focus on Spanish-speaking countries

- **Mass Marketing**

Conducting large-scale in-person marketing campaigns alongside the online Chabit launch campaign

5 Conquest

- **Global Expansion**

Positioning Chabit as the ultimate exchange platform worldwide

- **Conquest Marketing**

Expanding marketing efforts globally, noting that in previous phases, there will be global marketing with less emphasis

- **Future Services**

Launching tokens, NFT collections, and more, where Chabit shareholders will have advantages

Why **chabit** ?

"The creation of a platform with a disruptive concept that utilizes the most pioneering technology to simplify the lives of its users will lead to a massive adoption of cryptocurrencies. This solution addresses the biggest challenge currently facing the crypto world: difficulty and mistrust. Our users will use blockchain without even realizing it and will be delighted."

Market

OBJECTIVES

"Always deliver more than what is expected of you."

The market

"We are currently in a delicate global economic situation, on the brink of a potential financial collapse where the only solution to address the global liquidity problem lies within the blockchain. Cutting-edge technology projects will serve as the economic backbone after the implementation of CBDCs. We can talk about blockchains like XRPL or Stellar, which operate under ISO 20022 standards and will be responsible for this task. Hence, our goal is to create our own blockchain, based on a second layer of one of these blockchains, with the intention of adopting ISO 20022 standards."

Market potential

We are facing the most significant economic transition in history, standing on the precipice of an imminent recession where the entire world will be compelled to implement a financial solution to address the situation. Events like those set to happen before 2030 have not occurred in over 200 years, and we will witness a complete overhaul of the entire economic system. That's why it is crucial to be a global reference as the most accessible, easy, and convenient economic integration solution, thus providing us with the opportunity to capture an unprecedented market share."

Target Market: Latam

In the initial phase, we will focus on a Spanish-speaking audience for two primary reasons. First, we have a natural affinity with the Spanish language as it is our native tongue. Second, Spanish-speaking countries are in dire need of economic assistance. Our solutions directly address a significant portion of the issues in these nations, making it the ideal market for achieving rapid acceptance. We solve a global problem and leverage the adoption of blockchain that will come in the subsequent years."

Target Market: Global

Subsequently, after establishing a large, strong, and committed Spanish-speaking community that is aware of the revolution that Chabit represents, we will shift our strategy towards global expansion. By that point, we will have a usable product, making it easier to capture the world's attention. This strategy does not preclude marketing in other languages, especially English, from the outset, but it will not be our primary focus in the early stages.

Expansion Strategies

- **Platform Creation**

We will build the platform that will revolutionize the way people interact between traditional economy and the crypto world. Everyone will want to use Chabit

- **Global Applications**

We will approach businesses and merchants, providing a more optimized, simple, and cost-effective solution

- **Massive Events**

We will mobilize large crowds with the creation of massive global events

Entry BARRIERS

*"The question is not who is going to allow me,
but who is going to stop me."*

Entry barriers

The most significant entry barrier faced by blockchain technology is the lack of knowledge. Over 80% of people are unfamiliar with the crypto world. Therefore, mass adoption needs to be facilitated through accessible solutions where users know they are using blockchain but are unaware of it.

Another important factor is complexity. Currently, the crypto world is too intricate for the majority of users. Many get lost, don't know which applications to install, what a hot

Hence Our goal is to provide the utmost simplicity with an AI-based accessible interface, making users perceive that blockchain is easy.

The third barrier to overcome is security. Many individuals fall victim to deceitful practices from a multitude of individuals who aim to exploit their lack of knowledge about this technology. Therefore, our objective is to completely eliminate the risk by offering a unified platform where everything is interconnected and guided to ensure the safest user experience, leaving no room for doubt regarding its utilization.

Our COMPETITORS

*"Opportunities do not just happen,
you create them."*

References:

Huobi

MEXC Global

PROBIT

Our competitors

Having competition ensures that a product or service is valid and accepted. Moreover, when we add factors as crucial as innovation, improvement, and evolution, thus creating a total paradigm shift from the current concept of our competition, we can enter the market significantly, with the expectation of achieving exponential growth. This is due to being a more efficient, innovative, technological, current, and effective solution.

Competitor 1

The primary reference we must consider is Binance, as it is the largest exchange in the entire crypto world, the strongest rival to overcome, and the one from which we can learn the most

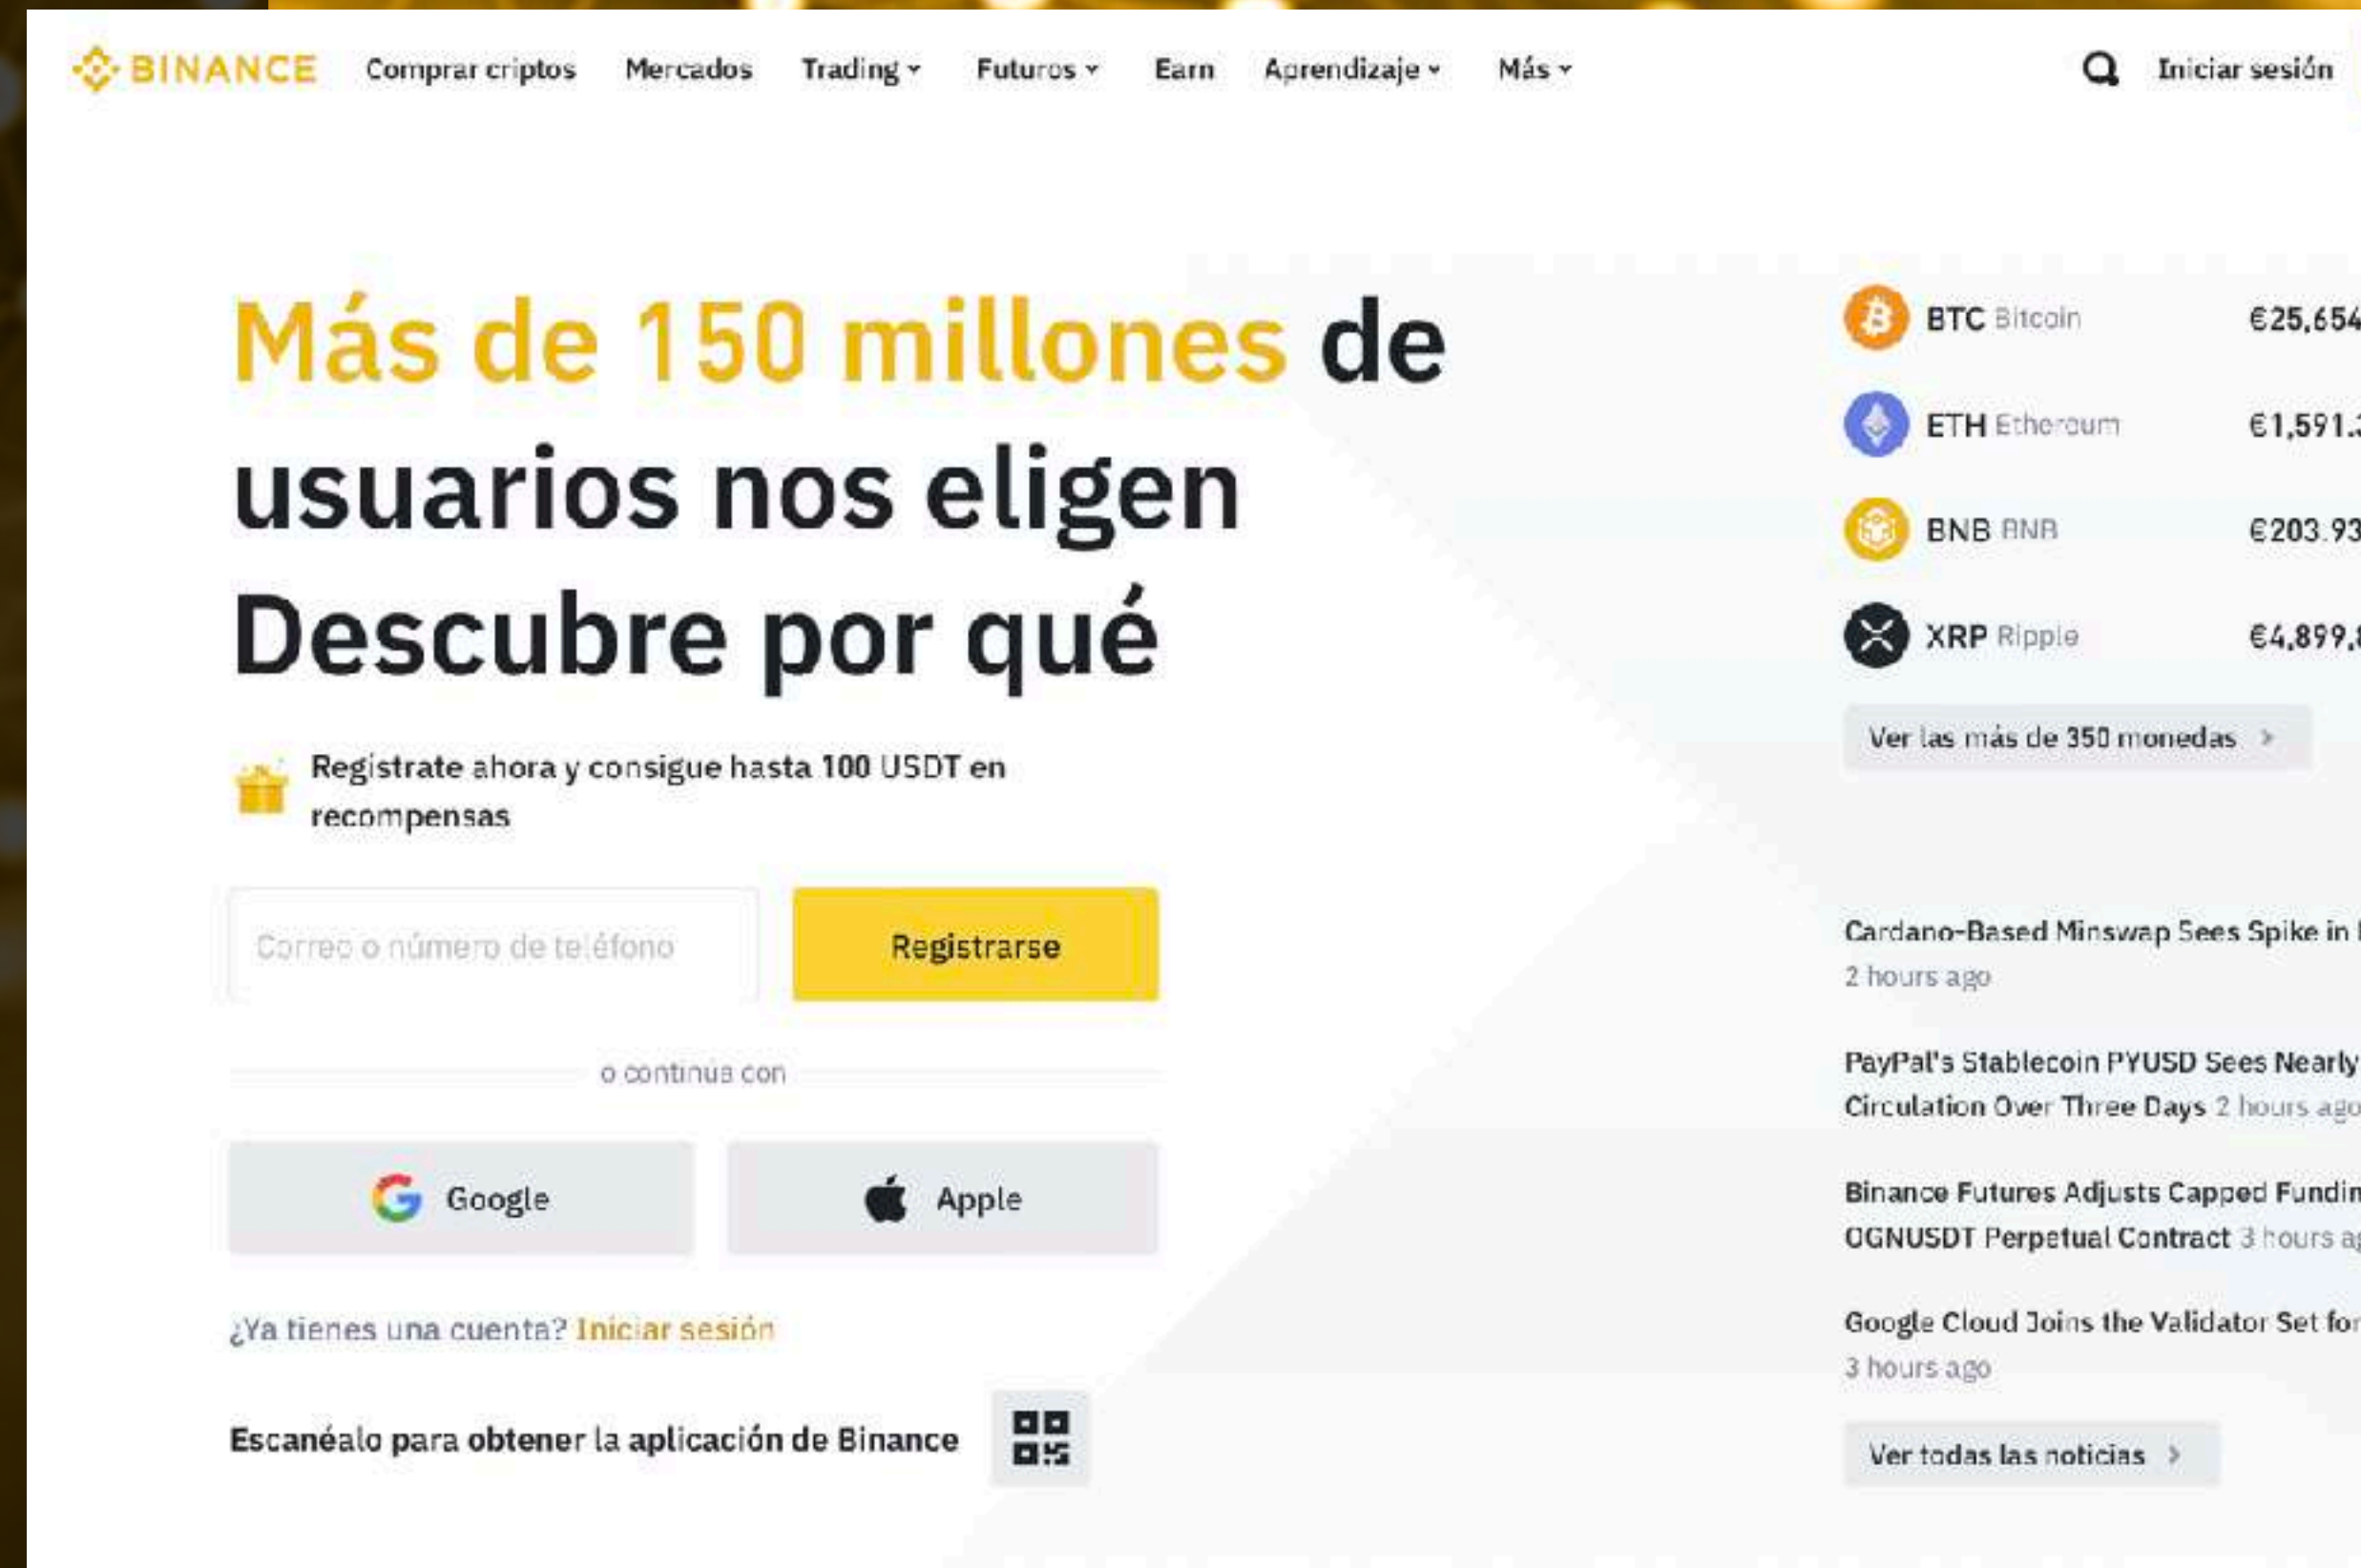

BINANCE

Analysis and Improvement

Binance is currently the largest exchange in the crypto world, reigning with a significant lead. It boasts a user base of over 150 million, a daily average trading volume close to \$4 billion, and the lowest fees in the entire crypto space. Listing on Binance is the goal for every project. Its numbers are massive, but it remains an exchange with a complex user experience for the majority, as navigating its intricacies requires prior experience to avoid getting lost

Design and Usage

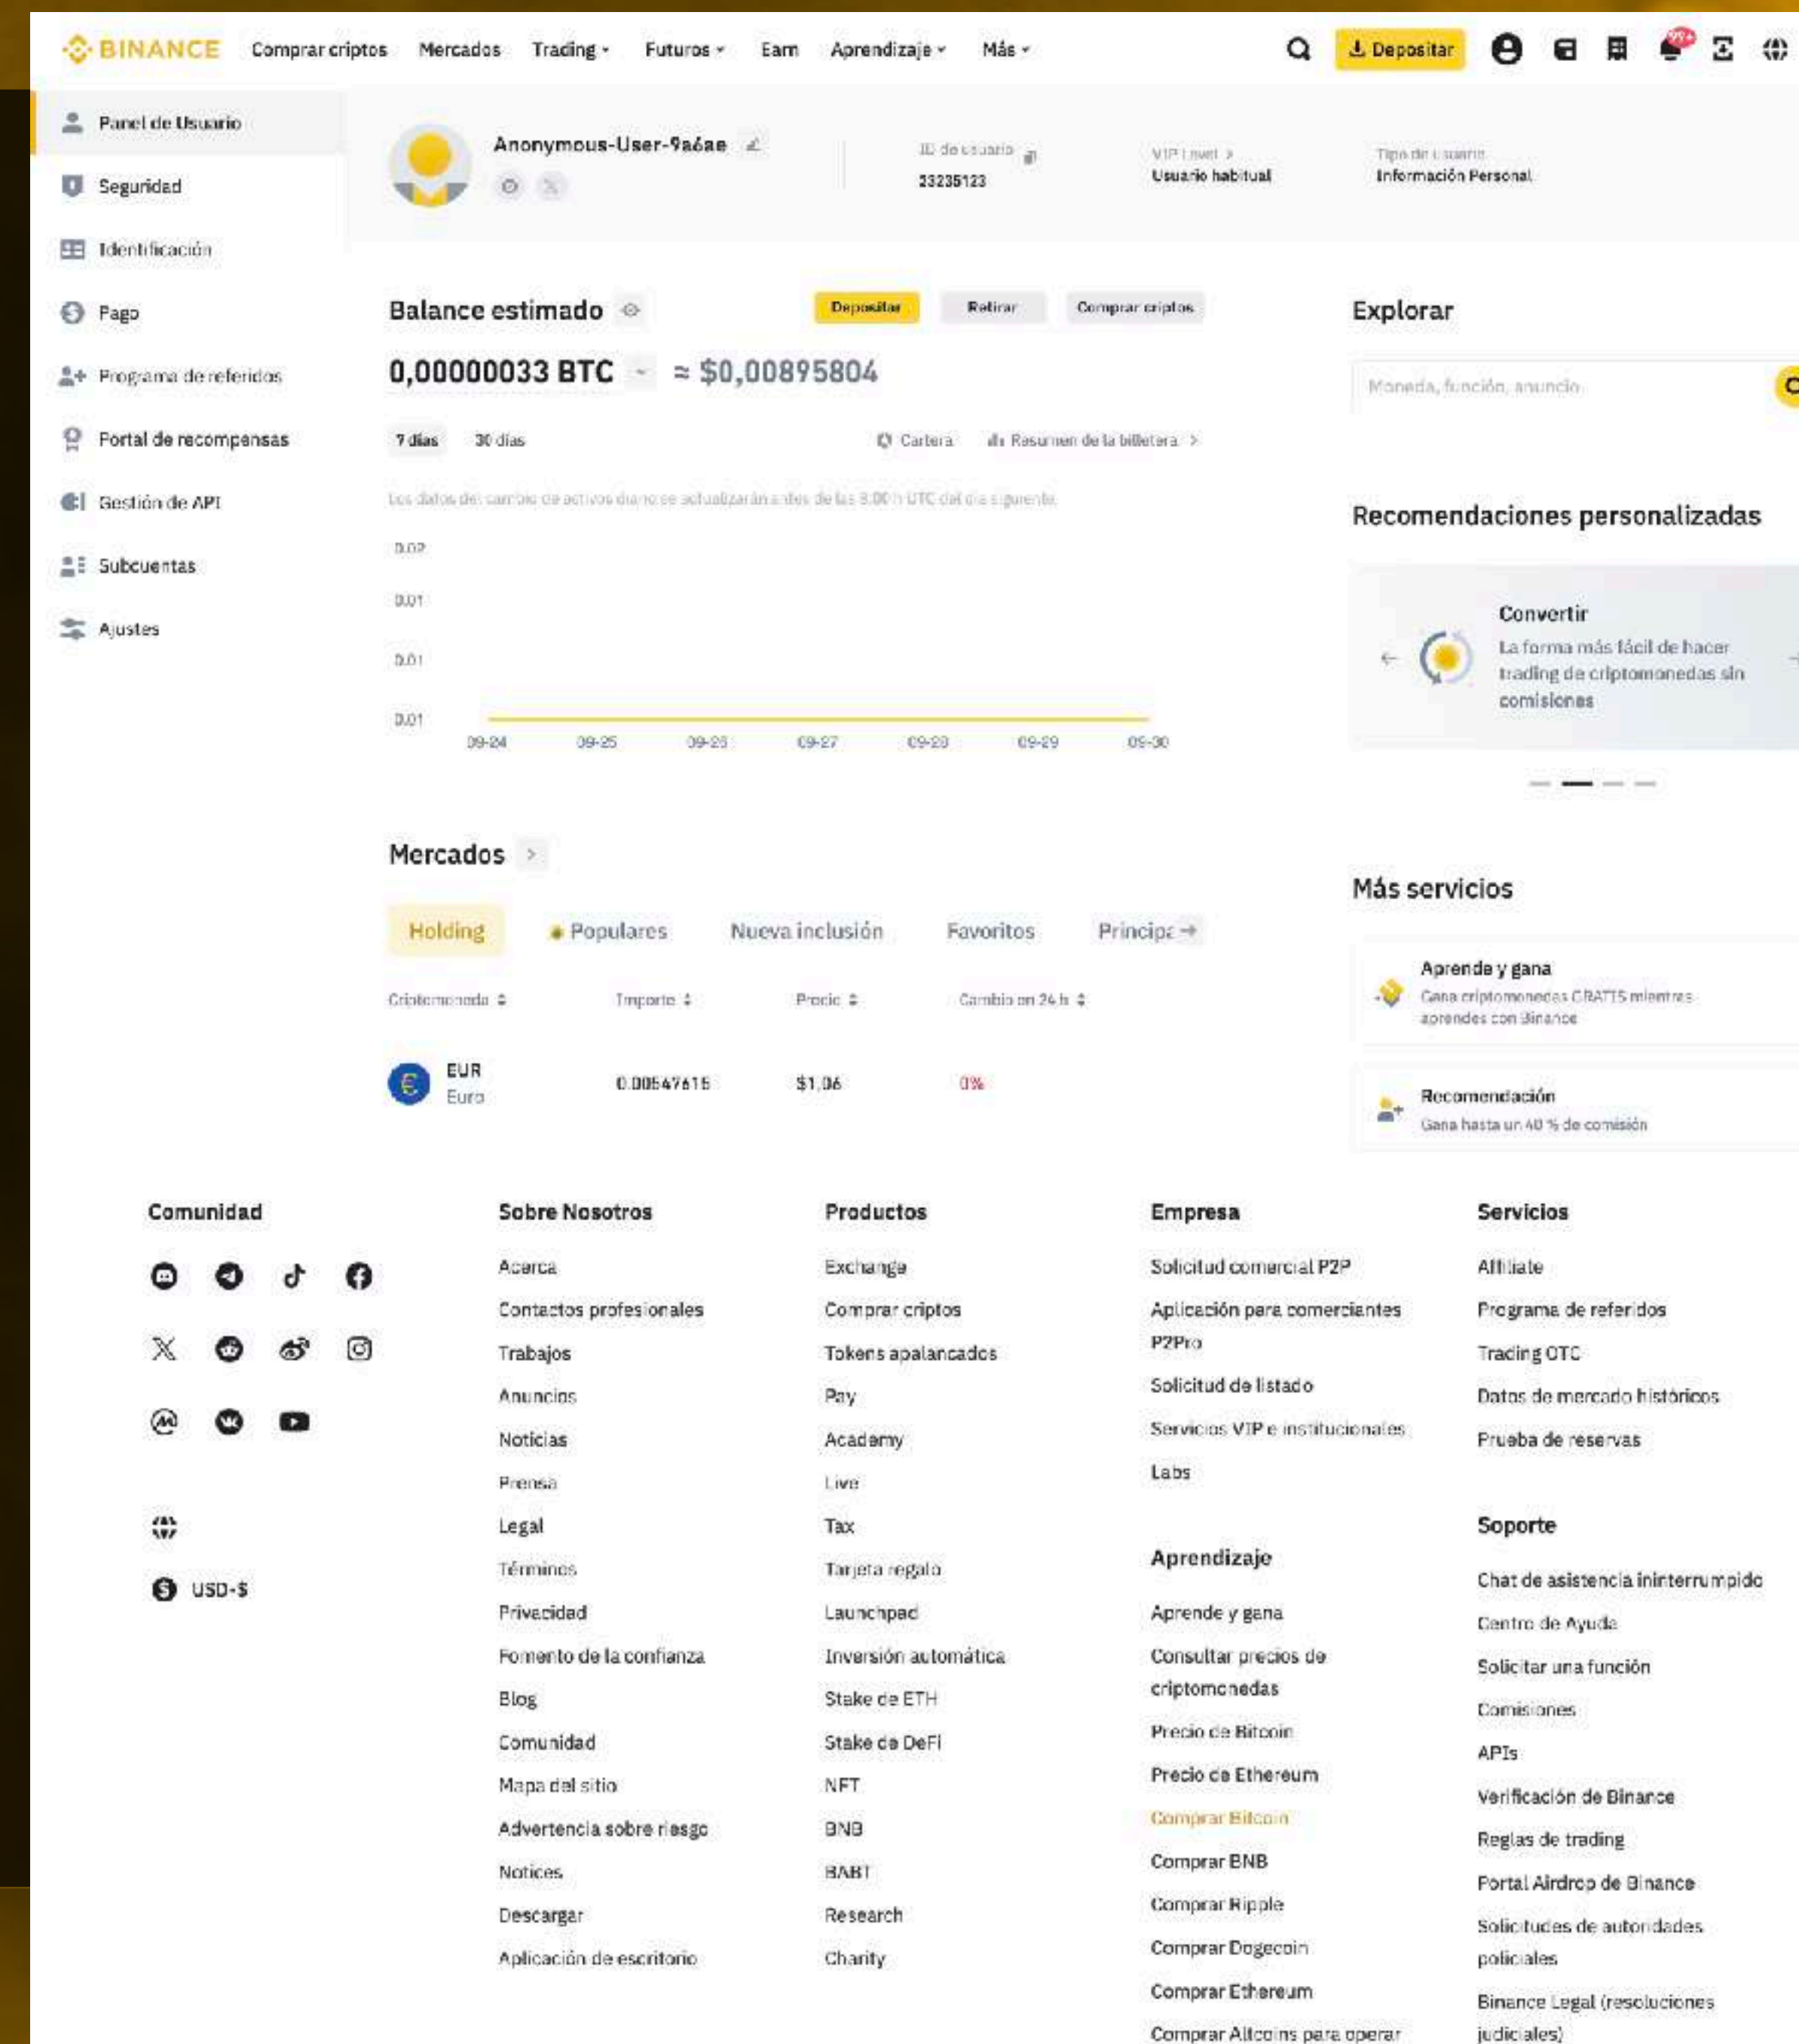

- Clean design with a predominant white color scheme
- Contrasts in yellow and cement gray
- Well-structured website in some sections
- Offers the lowest fees
- Quick login if you have the mobile app

The screenshot displays the Binance website's registration page. At the top, the Binance logo is followed by navigation links: 'Comprar criptos', 'Mercados', 'Trading', 'Futuros', 'Earn', 'Aprendizaje', and 'Más'. A search icon and 'Iniciar sesión' link are on the right. The main headline reads 'Más de 150 millones de usuarios nos eligen' and 'Descubre por qué'. Below this, a promotional offer states 'Regístrate ahora y consigue hasta 100 USDT en recompensas'. The registration form includes a text input for 'Correo o número de teléfono' and a yellow 'Registrarse' button. Below the form, it says 'o continúa con' followed by 'Google' and 'Apple' buttons. A link for '¿Ya tienes una cuenta? Iniciar sesión' is present. At the bottom, there is a QR code and the text 'Escanéalo para obtener la aplicación de Binance'. On the right side, a list of cryptocurrencies is shown with their prices: BTC Bitcoin (€25,654), ETH Ethereum (€1,591.3), BNB BNB (€203.93), and XRP Ripple (€4,899.8). A link 'Ver las más de 350 monedas' is below the list. Further down, there are news snippets: 'Cardano-Based Minswap Sees Spike in...', 'PayPal's Stablecoin PYUSD Sees Nearly Circulation Over Three Days', 'Binance Futures Adjusts Capped Funding OGNUSDT Perpetual Contract', and 'Google Cloud Joins the Validator Set for...'. A link 'Ver todas las noticias' is at the bottom right.

Website Structure

- A classic website, without animations, with a slightly chaotic user panel
- Chaos caused by the lack of division between different sections
- Too many sections that 99% of users don't use
- An overly cumbersome footer, uninterrupted by divisions
- A feeling of being somewhat lost in the interface

Tone

- Seemingly simple
- Clean, with a predominance of white
- Lacks the prominence of Binance's color, yellow
- Yellow color conveys positivity
- The black text adds seriousness

Brand

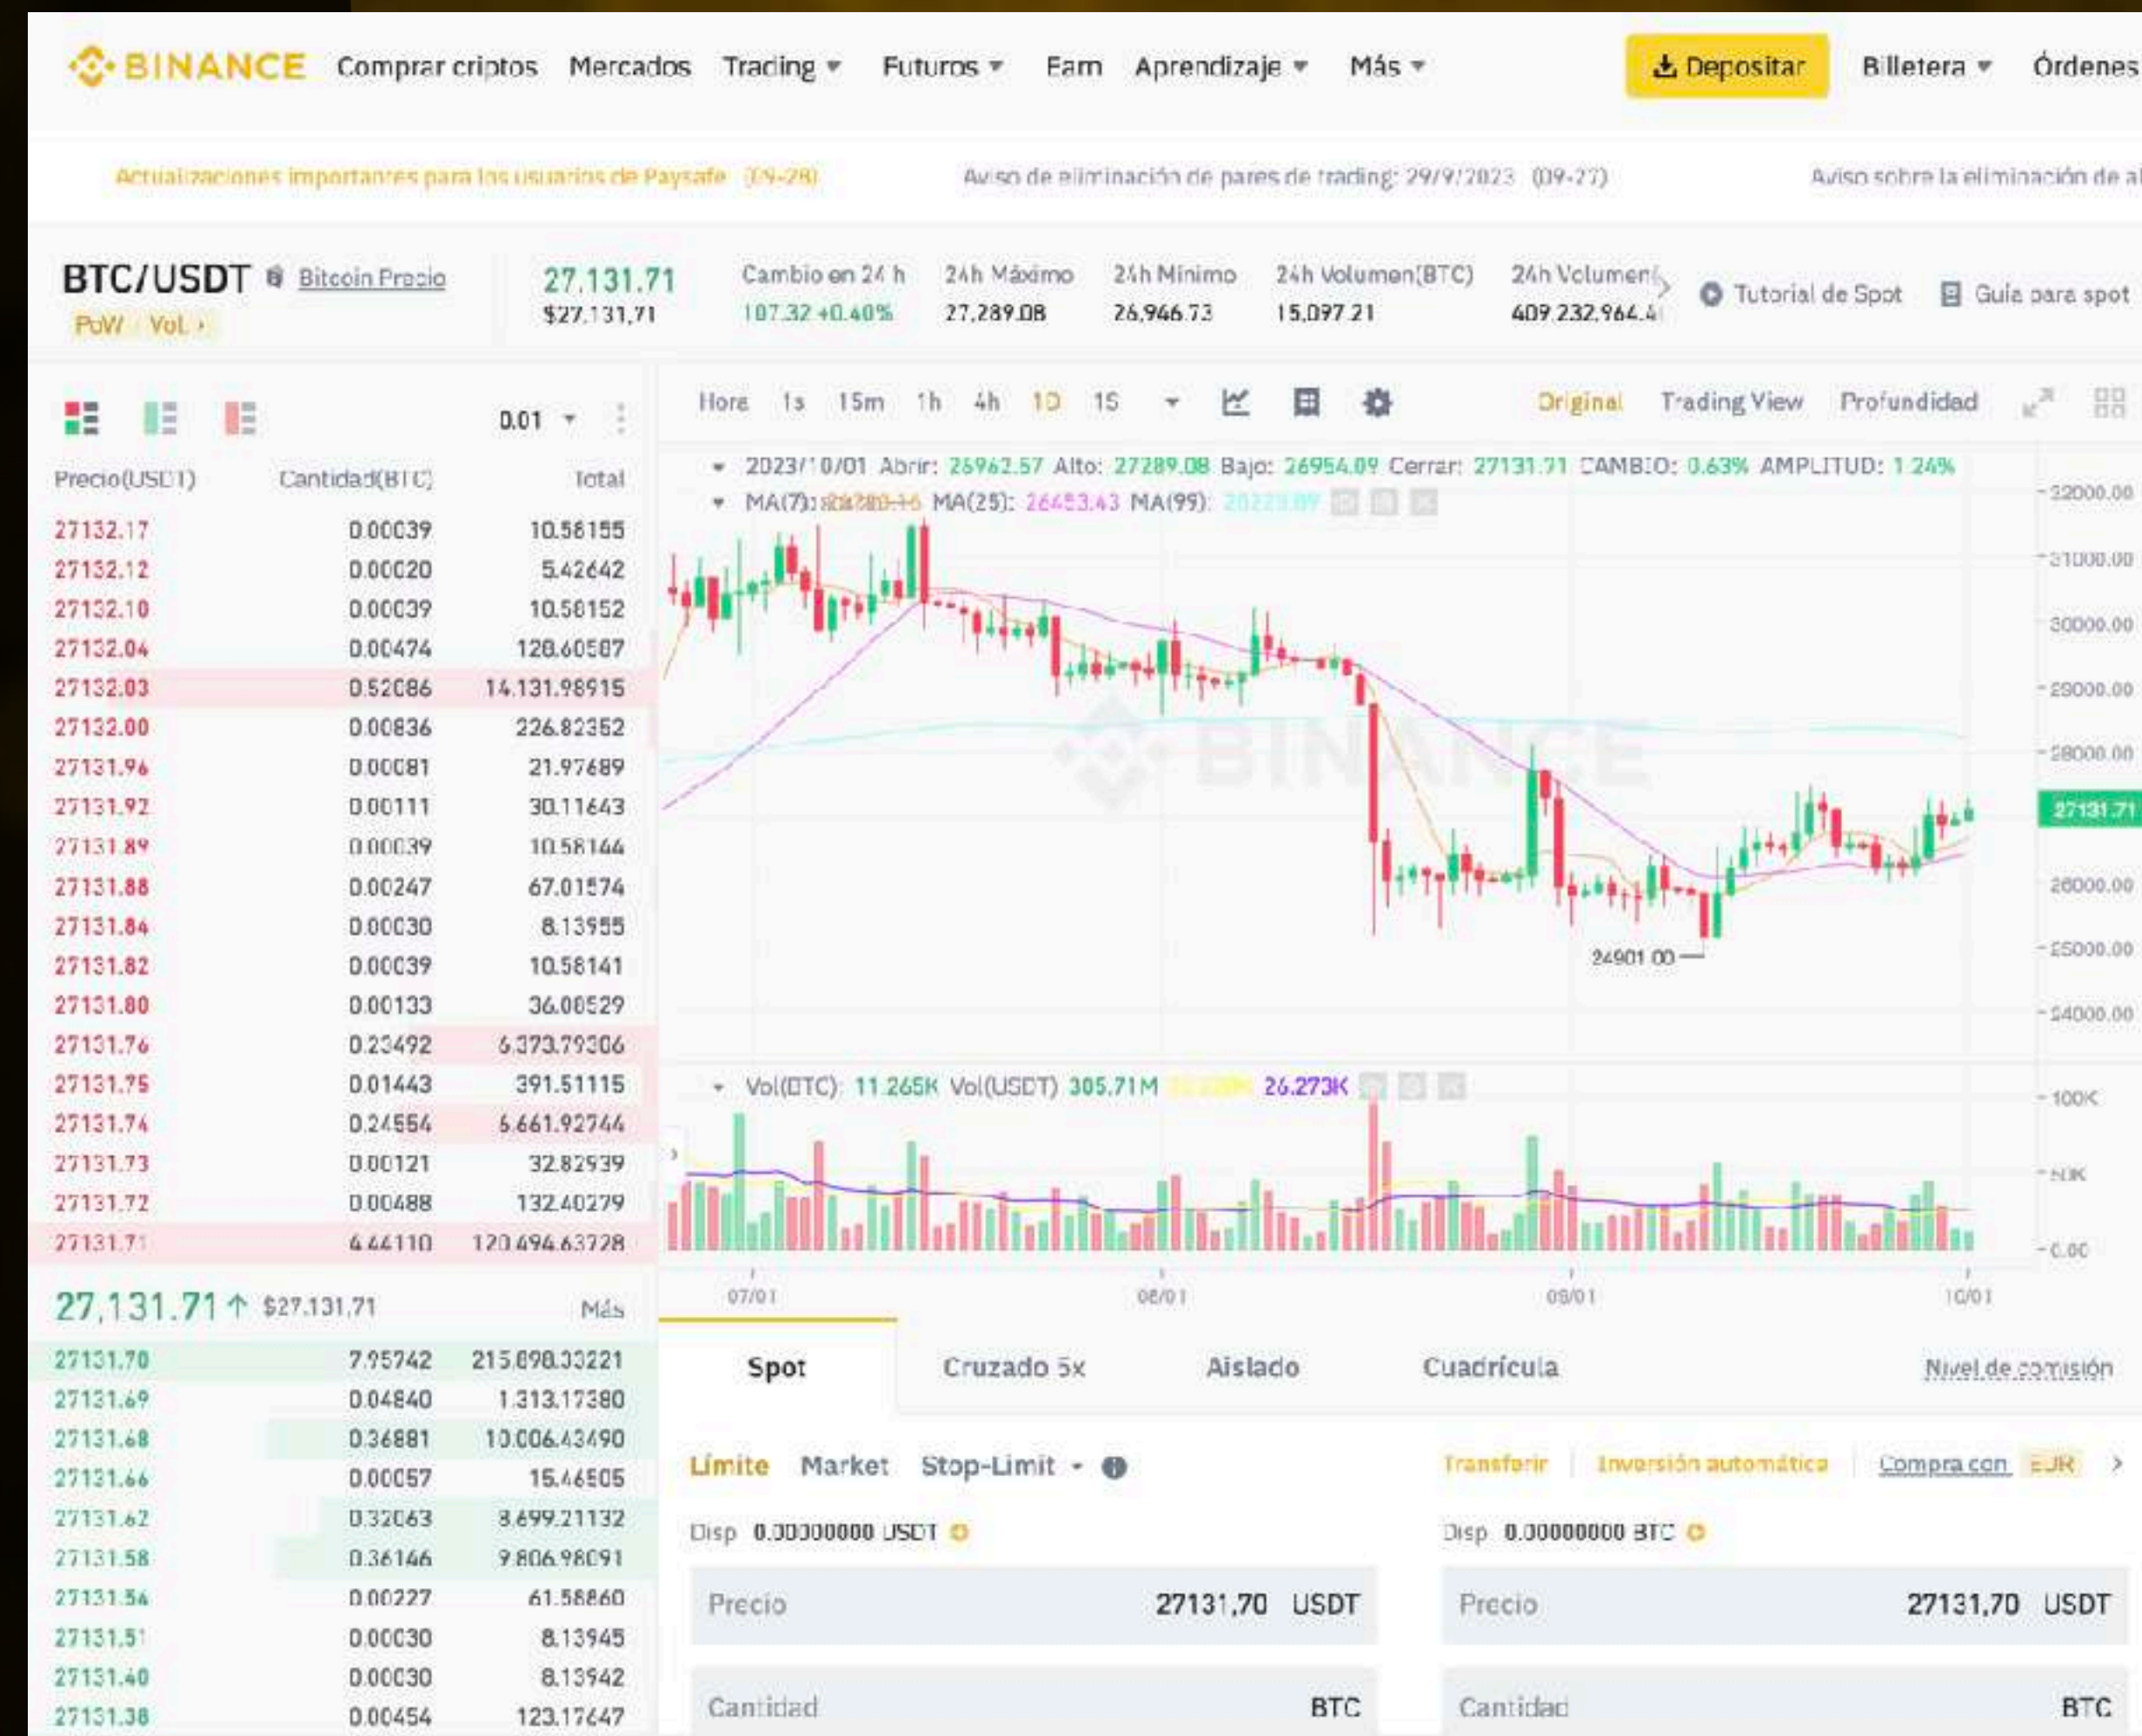

- Its low exchange fees are its major selling point
- It holds the highest liquidity among all exchanges
- Its customer service is excellent
- The withdrawal and deposit process to the bank is fast and nearly cost-free
- Great advantages if you own a substantial amount of their native currency, BNB

Purchasing process

- is relatively simple and cost-effective, although it involves too many steps for someone new to the field
- Offers a secure and swift P2P option
- Accepts bank deposits and credit card payments

Withdrawal Process

- Works quickly with low fees
- Can be confusing for an inexperienced user

Conclusions: Binance

Binance is the largest exchange in the world, boasting the best user base, and its system functions very well. However, the interface is chaotic and outdated, with too many sections lacking explanations for new users. The colors and the overall appearance are fine, but there are very few separations, and the menu locations are not entirely intuitive. There is significant room for improving the user experience. Therefore, our proposal will disrupt the routine of Binance's regular users

Competitor 2

The second reference we can draw inspiration from is Coinbase. It has a cleaner and less cluttered interface than Binance. It's easier for new users to make purchases, but it comes with higher fees

The Coinbase logo is displayed in a bold, blue, lowercase sans-serif font. The letters are closely spaced and have a slight shadow effect, giving it a three-dimensional appearance. The logo is centered horizontally on the right side of the slide.

Analysis and Improvement

Coinbase is the second-largest exchange in the crypto market. It offers a simpler proposition compared to Binance, with substantial user base and trading volumes, though not at the same level. Its interface is much simpler and more accessible, but it has historically faced several service instability issues. The fees are relatively high, and it is not available in all countries. It is heavily oriented toward the American audience

Design and Usage

- Clean design with a predominance of white color
- Contrasts in blue and black
- Website better structured than Binance
- Comes with higher fees, especially when exchanging for fiat
- Not available in all countries

The screenshot displays the Coinbase website interface. On the left is a navigation menu with options: Inicio, Mis activos, Operar, Gane, Recompensas por aprender, Web3, and Ver más. The main content area shows the user's account balance as 0,91 € and a line chart of the balance over time. Below this is a 'Precios' section with a 'Watchlist' dropdown. It lists Bitcoin (BTC) at 25.620,25 € (up 0,28%) and Ethereum (ETH) at 1583,40 € (down 0,24%). A news article from BeInCrypto is featured, titled 'La reducción a la mitad del Bitcoin se ha completado en un 85 %, y la oferta en manos de los poseedores a largo plazo está cerca del máximo histórico'. The footer includes links for Inicio, Carreras, Asuntos legales y privacidad, and a copyright notice for 2023 Coinbase.

Website Structure

- A classic website, without animations, clean, and less cluttered
- Like Binance, there is little division between panels, but somewhat better
- It has two interfaces, for advanced and new users
- A step forward in terms of user-friendliness
- There is still too much information, and it's disorganized

The image shows two screenshots of the Coinbase website interface. The top screenshot displays the 'Operar' (Trade) section, which includes a navigation menu on the left with options like 'Inicio', 'Mis activos', 'Operar', 'Gane', 'Recompensas por aprender', 'Web3', and 'Ver más'. The main content area features a 'Categorías' (Categories) section with buttons for 'DeFi', 'Contratos inteligentes', 'Monedas', and 'Stablecoins'. Below this is a search bar and a table of assets with columns for 'Nombre', 'Precio', 'Cambio', 'Capitalización bursátil', and 'Vigilar'. The table lists Bitcoin (BTC), Ethereum (ETH), Tether (USDT), BNB, and XRP. To the right of the table is a 'Comprar y vender' (Buy and sell) panel with a 'Comprar' button and a 'compra única' (one-time buy) option. The bottom screenshot shows the 'Mis activos' (My Assets) section, which displays a balance of '0,00 €' for 'Mi efectivo' (My fiat) and '0,91 €' for 'Mis criptomonedas' (My cryptocurrencies). The 'Mis criptomonedas' section includes a table with columns for 'nombre', 'Saldo total', and 'Precio', listing 'The Graph (GRT)' and 'Amp (AMP)'. The background of the image features a dark blue and black gradient with a network of glowing yellow nodes and lines.

Nombre	Precio	Cambio	Capitalización bursátil	Vigilar
Bitcoin (BTC)	25.620,41 €	+0,25 %	499,4 mil M€	Comprar
Ethereum (ETH)	1583,53 €	-0,26 %	190,3 mil M€	Comprar
Tether (USDT)	0,95 €	+0,00 %	78,7 mil M€	Comprar
BNB (BNB)	202,00 €	-1,01 %	31,1 mil M€	Comprar
XRP (XRP)	0,49 €	-0,26 %	26,0 mil M€	Comprar

Nombre	Saldo total
USDC (Genera un 5,00 % APY)	0,00 €
Euro	0,00 €

nombre	Saldo total	Precio
The Graph (GRT)	0,74 € 8.59314182 GRT	0,09 € ↗ 2,66 %
Amp (AMP)	0,17 € 11.21410494 AMP	0,00 € ↘ 0,06 %

Tone

- Simple
- Clean, with a predominance of white
- Sufficient prominence of the color blue
- The color blue conveys stability and trust
- The black text adds seriousness

Brand

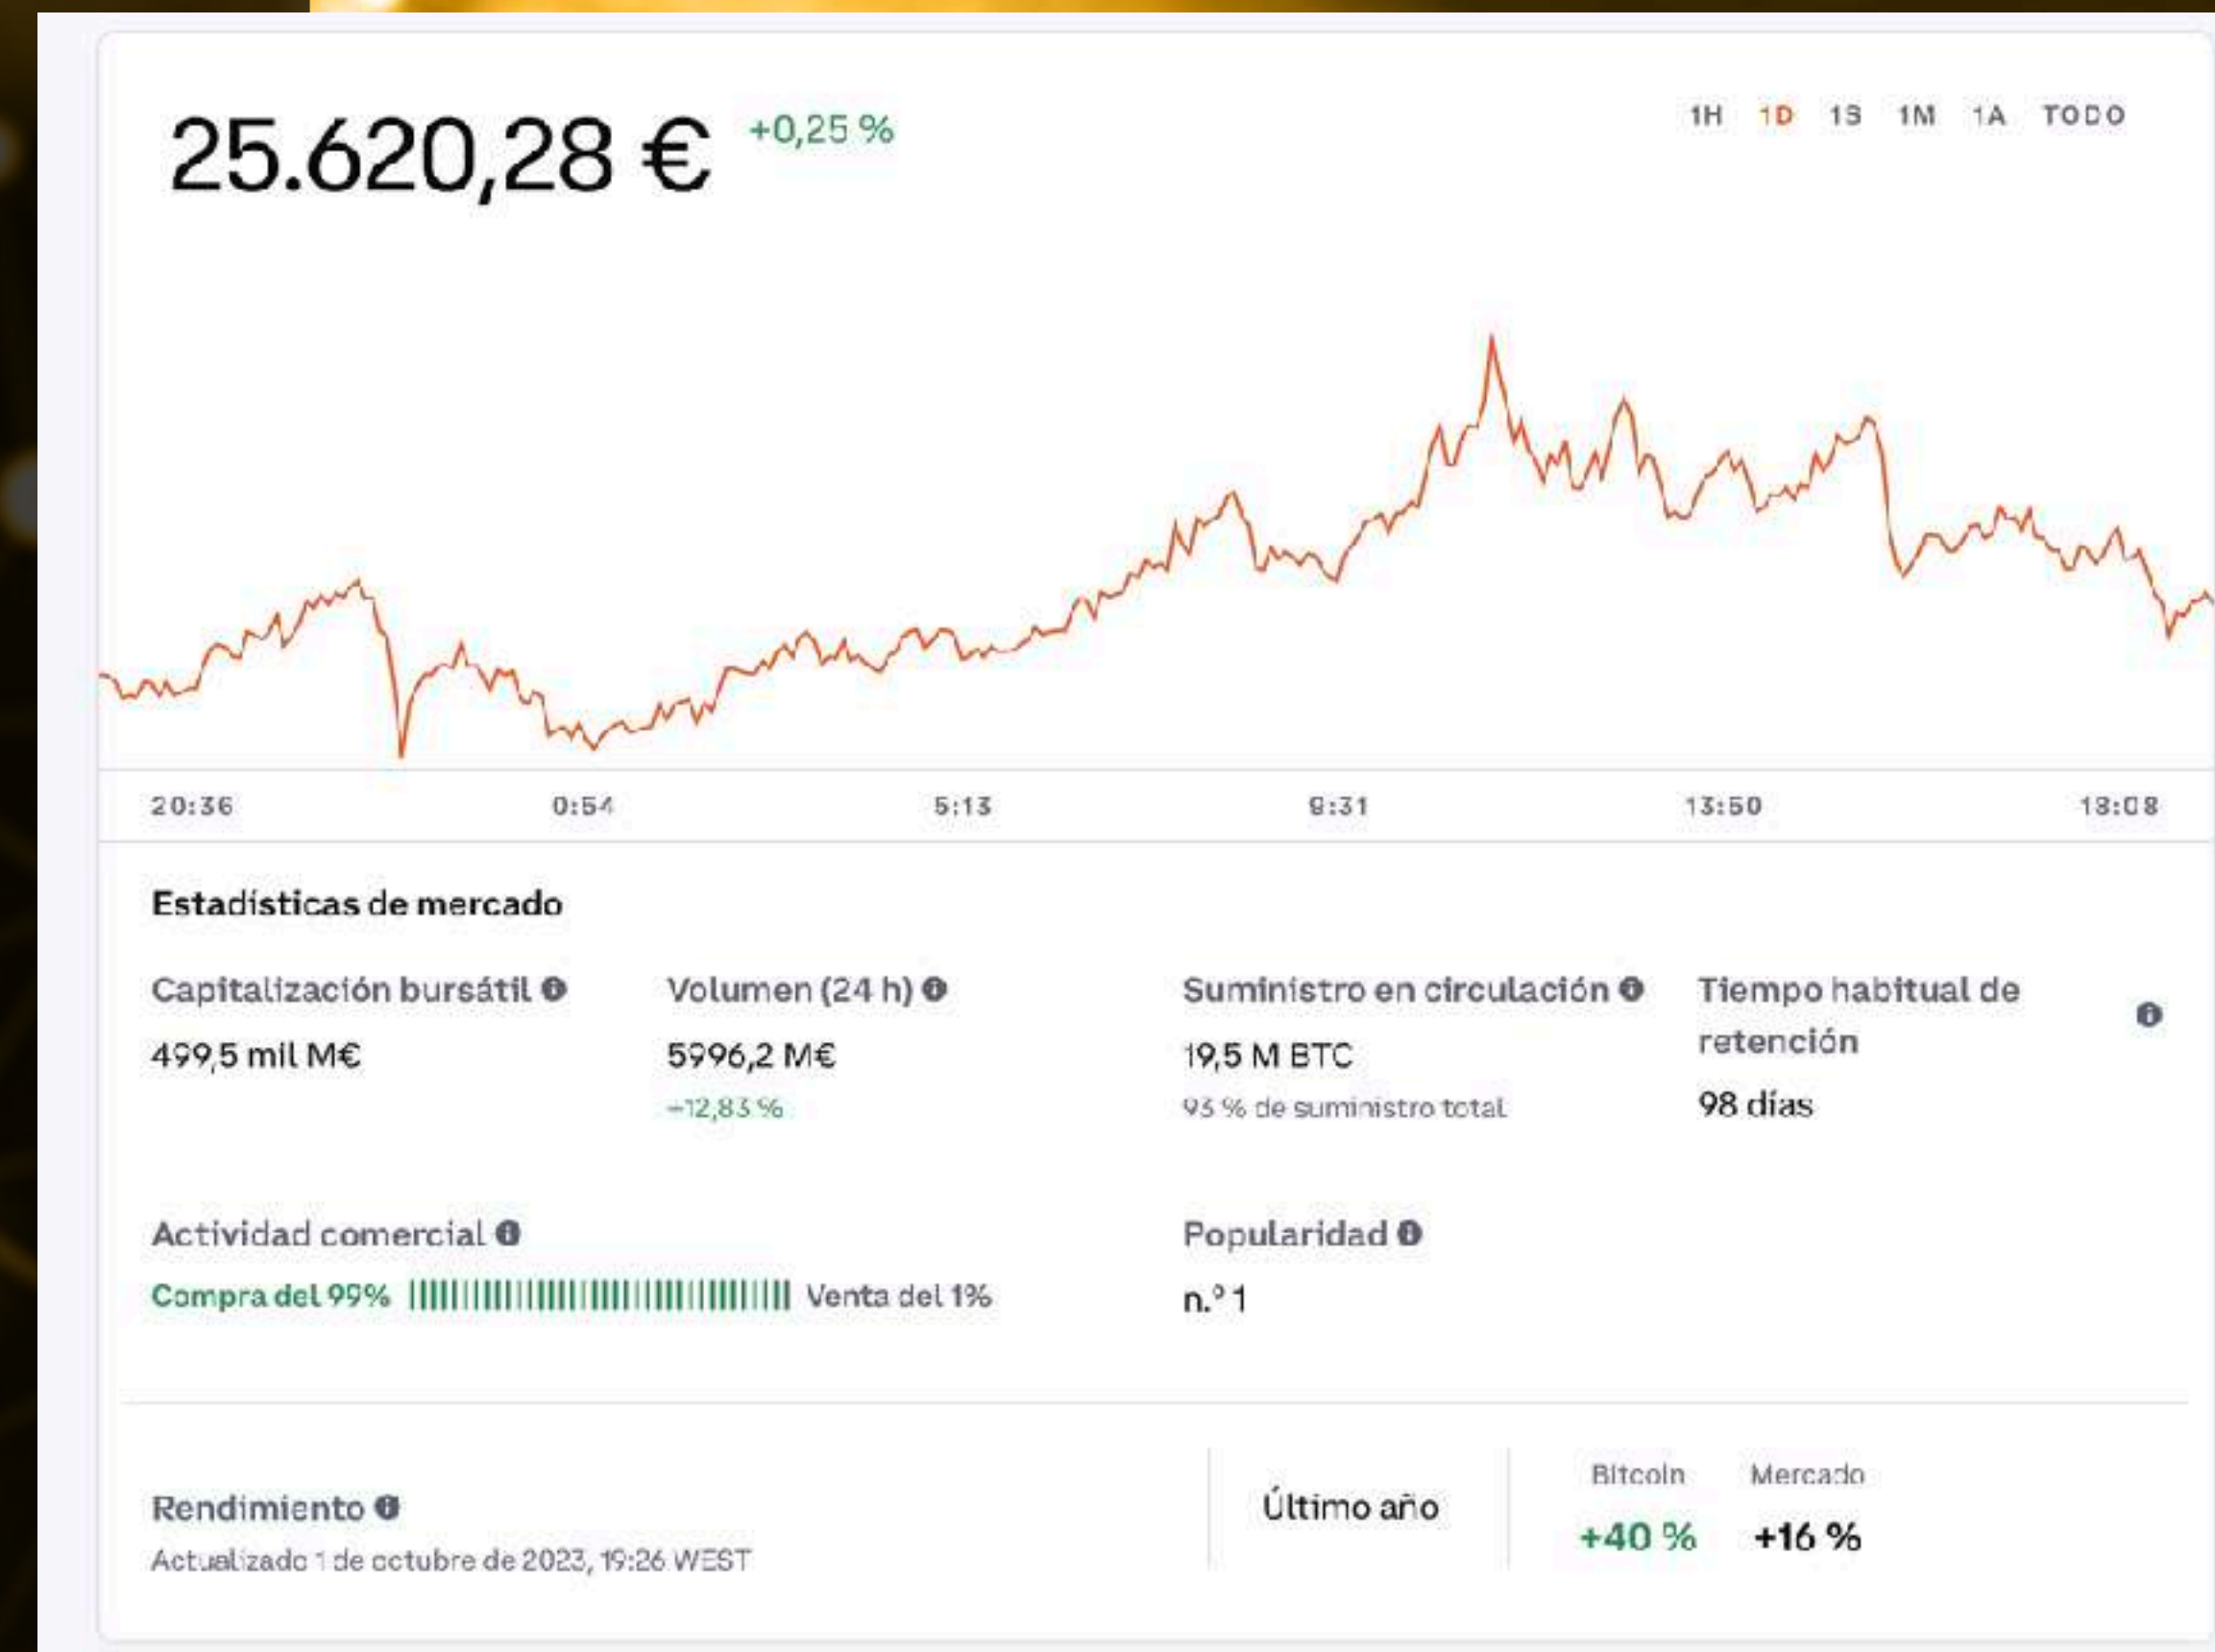

- It has good liquidity, with less variety compared to Binance
- The withdrawal and deposit process is fast but more expensive
- Experiences withdrawal issues in some countries
- Heavily oriented toward the American audience due to high fees

Purchasing Process

- A much simpler purchasing process, but the fees are quite high
- Accepts bank deposits and credit card payments
- Additional options such as PayPal

Withdrawal Process

- It works quickly, but sometimes it does not allow withdrawals, especially in Europe
- More user-friendly for new users

Conclusions: Coinbase

Coinbase possesses a simpler and more accessible interface, but it falls significantly short of the concept we intend to implement. It remains somewhat perplexing for inexperienced users. It is evident that a simpler interface alone does not suffice for global adoption. Many individuals grapple with basic applications such as WhatsApp. The screen displays too much distracting information for those unfamiliar with exchange interfaces. The level of accessibility we will introduce in Chabit will make interfaces like Coinbase's seem outdated

Remaining Competition

There is a widespread global experience among exchanges; they all offer a similar experience to users. Their main differences generally lie in the countries where they are available, colors, operational speed, and fees. However, in terms of usage, they are essentially the same coin with a different design. For this reason, what we aim to achieve is so innovative that initially, we will have no competition in terms of the user's final experience

Branding

CHABIT

"Always deliver more than is expected of you"

Our Branding

After analyzing the main exchanges in the crypto world, we wanted to take a different approach to the brand's image. Differentiating ourselves significantly from the traditional, both visually and functionally, will be the pillars that define the Chabit experience

The logo for Chabit features the word "chabit" in a lowercase, rounded sans-serif font. The letters "ch" are white, "abi" are yellow, and "t" is orange. A small white Bitcoin symbol (₿) is positioned above the letter "t".

chabit[₿]

Design and Usability

- We will employ a minimalist design, concise, with just the necessary elements on the screen, as it will not be required, given the assistance of ChAI, simplicity at its finest
- Dark gray and gold tones will prevail, deviating from the typical use of white as the base color
- The choice of this color palette is aimed at providing users with an exceptionally comfortable, almost luxurious experience. It is well-known that luxury is associated with well-being, and with Chabit, we aim to make our users experience an exceptional user experience

Colours

- We will use dark gray to evoke neutrality, sophistication, elegance, and luxury but with a more modern and refined touch than pure black
- Off-white, in contrast to the traditional cleanliness of pure white, represents calmness, serenity, and purity with just the right amount of softness and elegance
- Shades of gold symbolize power, ambition, abundance, wealth, and luxury, characteristics associated with success. These shades reflect our intentions and where we aim to take Chabit
- All these colors are focused on making a very clear distinction from our competition

chabit⁸

The logo features the word "chabit" in a lowercase, sans-serif font. The letters "cha" are dark gray, "bit" is yellow, and a small Bitcoin symbol (₿) is positioned at the top right of the "t".

chabit⁸

The logo features the word "chabit" in a lowercase, sans-serif font. The letters "cha" are white, "bit" is yellow, and a small Bitcoin symbol (₿) is positioned at the top right of the "t".

Names and Terminology

- We decided to use the term 'cha' to reference the 'ch', which is commonly used in the Spanish language. This is a clear demonstration of our intention to assist this market. 'Bit' is a terminology frequently used in the crypto world, given its presence in Bitcoin, and it also alludes to the minimum unit of data transmission speed, making the composition particularly meaningful
- ChAI: Similar to Chabit, we use 'Ch' for the same purpose, adding the 'AI' termination, which is an abbreviation for Artificial Intelligence
- CB8: We use 'CB' as an abbreviation for Chabit, with the '8' being a part of our token's logo

chabit⁸

ChAI

CB8

CB8 Logo

- The coin shape makes sense since it's a cryptocurrency, and it's logical to use a form that is easily associated
- Vertical lines extending from the '8,' inherited from Bitcoin and the line crossing the dollar sign (\$)
- We have used a 3D aesthetic because it naturally associates with technology and gives a more sophisticated and impactful appearance
- The use of the number 8 is key; this magical number represents abundance, prosperity, and success, along with a mystical aura surrounding its meaning

Conclusion

We can conclude that Chabit will focus on providing a simple, streamlined, and accessible experience with an exclusive touch. It will stand far apart from the competition both in terms of aesthetics and functionality, setting a new paradigm for how users will interact with blockchain technology.

The magnetic aura of the numerology used, along with the selected colors, possesses a unique charisma with the ability to evoke in users the feeling of belonging to something grand and unique.

Uses

CHABITAPP

*"In every success story, you will find someone
who made a courageous decision"*

Uses: chabit App

Our app will feature two interface options designed for different user profiles. One is tailored for individuals with little to no knowledge of the crypto ecosystem, based on a simple, clean interface with just the right amount of information. This will give users the perception of using a straightforward banking application where they can view their balances in the local currency of their choice, and conduct cryptocurrency withdrawals and deposits without any confusion. Users won't even need to see their wallet address to receive or send funds

Cryptocurrencies, everything will be efficiently managed through our AI named ChAI. The second interface option, slightly more complex as it will cater to individuals with extensive trading knowledge and will need to provide more market information, will still follow the same minimalist and efficient foundation. However, the core functionality where users can use the app, place orders, and profit with minimal screen interaction will make a difference like never before seen in the crypto space. In the following section, we will provide an example of how this will work to further illustrate our vision.

Classic Interface

Regular or New Users

Imagine your name is Pedro, and you're new to the crypto world. You've downloaded an app, Chabit, where an AI named ChAI guides you from the very beginning to create your user account. This AI makes your experience user-friendly and simple. You can even speak to ChAI and ask questions about your blockchain-related concerns.

Now, you decide to make your first cryptocurrency purchase, but you're not quite sure how. So, you ask ChAI, and she will answer your questions, guide you, and take care of the entire process for you. Sounds convenient, doesn't it?

ChAI will ask you for your payment details to make the purchase using your card. With just a simple photo, she will analyze your information and complete the purchase

Now, imagine that your friend, Juan, is about to celebrate his birthday, and you want to send him a cryptocurrency that you consider a good investment. However, he doesn't have an account on the CHABIT App yet. ChAI will ask you for his WhatsApp number or email, and he will receive the download link with your referral code without you having to do anything else. When Juan registers, ChAI will notify you that he has signed up, and you can send him his gift using only his phone number, email, or username, much like the Bizum service. In Chabit, all wallets from different networks will be linked to user data. This simple, revolutionary, and risk-free vision will encourage users to register and adopt cryptocurrencies effortlessly. People tend to be discouraged by complex interfaces with numerous tabs and may shy away from crypto because they find it too challenging. Inexperience can lead to mistakes that result in users losing their funds, but that won't happen with CHABIT

Classic interface

Advanced users

Now, let's imagine that your name is Ernesto. You are an expert trader who spends hours analyzing charts, placing buy and sell orders, setting stop losses, and constantly monitoring price movements in front of your screen. But now, Ernesto, you download Chabit, an application where professional traders can use ChAI to provide predictions of market movements based on statistics or news and execute buy and sell orders simply by talking to it. You'll say, 'Hey ChAI, open a long position on Bitcoin with 20x leverage, isolated, at 26,220. Set the stop loss at 25,990 and take profit at 26,500.' The possibilities are limitless. Additionally, CHAI will alert you if there is a significant market movement or if you are approaching your take profit level, in case you want to close your position early. This is a true game changer, a different way of interacting with price charts

Defi integration

Now, let's imagine that Pedro, after sending money to his friend Juan, wants to buy a coin that is not listed in the Chabit App but can be found in decentralized applications like Uniswap or PancakeSwap. For that coin, he made a request in the Chabit App and received a unique code that identifies that specific coin. Pedro will only need to provide that code to ChAI, and ChAI will purchase and send that coin to the integrated Chabit wallet. But there's more. ChAI will analyze the contracts of decentralized projects, and in case there are any vulnerabilities, it will notify Pedro before proceeding with the purchase. We are talking about a completely different vision of the crypto world. Chabit will be the go-to platform that everyone will want to use for any kind of buying or selling

Payment Gateway

As an additional solution to the exchange, users will be able to keep their balances in any cryptocurrency and make purchases with their device using ChaPAY. The entire conversion process for making payments will be automated. Users can have predefined balances for payments, and the merchant will receive the fiat currency or CBDC of their choice. This means you can pay in USDT, and the merchant can receive any available CBDC. Our goal is to have the lowest exchange fees of all platforms. On the other hand, if the merchant uses ChaPAY within the Chabit network, the user can pay in USDT, and the merchant can choose to receive CB8 if desired, with fees close to zero

Integration with the Physical World

All the simplicity and services described above will be integrated with the physical world. Our goal is to provide businesses with a global payment method that combines cryptocurrencies and fiat currencies. So, a business can accept payments in USDT only, and ChAI will handle changing the buyer's CB8 balance to USDT, all automated, where the user and the merchant don't have to worry about anything, and at almost zero cost. Furthermore, we will focus on creating massive sporting events, concerts, or events of any kind where a massive number of people gather, and they will receive discounts for using Chabit. Our vision is to be present in as many places as possible so that Chabit becomes ingrained in the subconscious of everyone, even those who have not yet heard of it

ChAI

ChAI will be the AI responsible for carrying out all the processes within the Application. AIs require development and training, so the timeframe for having the AI sufficiently refined will be extensive. However, our idea is to incorporate functionalities as we develop. In other words, we will launch a simpler application where the training requires less time, and we will continue to train ChAI as we add services to the Chabit App

Analysis

SWOT

*"Success is not achieved by what you know,
but by what you apply"*

Weaknesses

- **Funding scarcity**

We are in a wild market where new projects emerge daily, and to stand out, besides having a great idea, we need substantial financial investment to reach everyone

- **Finding suitable professionals**

Finding the right professionals for such an ambitious and technological project will be a laborious task due to the scarcity of genuine blockchain programming experts, coupled with the complexity of integrating emerging technologies like AI

- **Dependency**

There is a real dependency tied to the success of the CB8 token and the sale of Chabit shares to execute the project

Threats

- **Scammers**

The constant abuse of scams negatively impacts investor trust, leading to fears and premature market exits, presenting us with a community's poor disposition from day one

- **Plagiarism**

Other projects will copy our idea, which is why we need to be the first, the fastest, and the ones that provide the best solution to position ourselves in the market as the perfect choice

- **Volatility**

Cryptocurrencies are highly influenced by news and social influences, as it is a market in its early stages, and price movements are more significant and abrupt than those in traditional markets

Strengths

- **Transparency**

From day one, our communication strategy with the community has been based on transparency, thus exposing our image publicly, which is uncommon in the blockchain world. This is a highly differentiating point that significantly strengthens the team's value

- **Chabit**

Chabit will set a precedent against the current concept of cryptocurrency platform and exchange, a highly distinctive and necessary 180-degree turn

- **Clear Objectives**

We are a serious and committed team that is openly transparent and has well-defined objectives, indispensable values to ensure success

Opportunities

- **Global Economic State**

The current economic situation, requiring an effective global change, will result in the largest financial transfer in history as the entire financial system migrates to blockchain or DLT. There is no better time

- **Scammers**

This negative aspect will turn positive as the community realizes that we are the opposite, and all investors will feel secure on board the ship bound for infinity called Chabit

- **Hispanic Revolution**

There are no blockchain projects of Hispanic origin that have set a real precedent in the blockchain. There is a first time for everything, and with Chabit, we will occupy that position

Targets

KNOW WHO

"Do not fear failure. Fear not trying."

Our Targets

1. Hispanic Users
2. Global Users
3. Companies and Businesses
4. Crypto Projects

1

Hispanic Users

- Spanish-speaking Individuals

- Locations

Spain, Latin America, Brazil, and Venezuela

- Age

Emphasis on the age range of 18 to 40 years, where the highest crypto adoption is found

- Profiles

Millennials, geeks, technology professionals, crypto investors, and young entrepreneurs

2

Global Users

- **People from around the world**

Focus on English and Chinese speakers

- **Locations**

USA, Europe, and Asia

- **Age**

Emphasis on the age range of 18 to 55 years

- **Profiles**

Millennials, geeks, technology professionals, crypto investors, and young entrepreneurs

3

Companies and Businesses

- Companies and businesses in need of payment solutions

- Locations

USA, Europe, Asia, Latin America, Venezuela, Brazil;
other countries will be addressed later

- Profiles

Any company or business with physical or digital payment systems; the solution is for all, with no exceptions

4

Crypto Projects

- **Blockchain Projects**

Any project with tokens or NFTs can be listed on Chabit

- **Location**

Blockchain projects are not tied to a specific location;
location is not a determining factor

- **Profiles**

They will need to meet stringent requirements to be considered, including KYC, transparency, and financial stability, among others

Marketing

KNOWHOW

*“What cannot be measured,
cannot be improved”*

Introduction

The global cryptocurrency market has experienced exponential growth over the past decade, challenging traditional financial conventions and opening new opportunities for investment and financial inclusion. In this context, the creation of a cryptocurrency exchange not only addresses the demands of the present but is also intrinsically connected to the future of the global financial landscape. In this section, we will delve deeply into our primary audience and how we plan to approach it, with an initial focus on Latin America, a region with significant potential for cryptocurrency adoption and exchange services

Target Audience

Our target audience comprises individuals and businesses looking to participate in the exciting world of cryptocurrencies to leverage their unique advantages. These include but are not limited to:

- **Investors & Traders**

Those seeking to diversify their investment portfolios and capitalize on the volatility and growth potential of cryptocurrencies

- **Businesses & Merchants**

Companies that want to accept cryptocurrencies as a form of payment, benefiting from faster and more cost-effective transactions compared to traditional payment methods

- **End Users:**

Individuals interested in using cryptocurrencies for daily transactions and international transfers, providing a secure and efficient alternative to fiat currencies

Latin America

Latin America, characterized by its diverse population and the development of emerging economies, stands as a strategic market for the expansion of our cryptocurrency exchange, Chabit. Several key indicators highlight the opportunity in this region, including:

Cryptocurrency Adoption:

Latin America has shown rapid growth in cryptocurrency adoption in recent years. According to recent statistics, over 16% of the adult population in Latin America has used cryptocurrencies at some point, compared to the global average of 11%

- **Growth Potential:**

Despite this remarkable growth, the cryptocurrency penetration in the region still holds enormous growth potential. Compared to other markets, Latin America is in the early stages of adoption, presenting a unique opportunity to capture a significant market share

- **Social Events and Education:**

Our focus in Latin America will be on organizing social events and educational activities to promote understanding and adoption of cryptocurrencies. This includes webinars, local conferences, and training programs designed to empower the community in the region, facilitating the adoption and use of cryptocurrencies

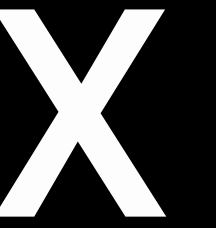

Future Outlook

As we establish our presence in Latin America, our goal is to gradually expand into other regions of the world. This will be based on our initial success and the continuous growth of the global cryptocurrency market. Our focus on education, promotion, and building trust in cryptocurrency exchange services will enable us to seize growth opportunities in both Latin America and international markets. We aim to become a trusted leader in the world of cryptocurrencies and contribute to the advancement of financial inclusion worldwide

The strategy

A sound communication strategy is crucial to efficiently and effectively convey our objectives. It's also imperative to coordinate it precisely across the appropriate channels and tailor the information to each of them. This approach allows us to maintain the project's essence while delivering high-quality content, ensuring that we stand out among the competition. As a result, platforms with active communities experience a 55% higher user retention rate compared to those that do not. Another significant factor is continuous education, where 78% of crypto asset investors consider it a key factor in decision-making. Coupled with an optimized user experience enabled by AI, it leads to a 40% increase in overall user satisfaction

X, formerly known as Twitter, is considered one of the quintessential communication channels in the crypto world. It boasts an extremely active user base where maintaining engagement requires a constant presence. To achieve this, it's essential to add value through content, provide information about our activities and direction, and create opportunities for community interaction. It's worth noting that on X, who you follow is crucial. Therefore, at present, we follow very few accounts, and it's essential to be selective about who we follow.

As a communication strategy, we will establish regular project updates as they unfold to create anticipation among users and maintain continuous interaction to achieve high engagement. Primarily, we will leverage influencers, promoters, and shillers for promotion and ongoing expansion, as they are familiar with and engaged in this field. After conducting a study on X regarding cryptocurrency investors, the figures indicate that 87% of cryptocurrency investors follow accounts related to this niche. This underscores the significant importance of having a presence on a dissemination channel like X.

Telegram

Telegram is the primary communication channel used by cryptocurrency users. Currently, the majority of projects maintain constant communication with their users through this platform because it enables fast and effective communication, making it the ultimate dissemination channel for such projects. It is considered one of the most powerful channels, given the extensive crypto community behind it, where the number of related channels is vast. It is also the most commonly used platform for conducting Ask Me Anything (AMA) sessions and informing the community about any new information.

One of the strategies to be employed on Telegram is advertising in other groups related to the crypto world. There are hundreds of channels where new projects are constantly advertised, and their users actively seek investment opportunities. They already have a mindset inclined toward investment, making them the perfect target to reach and grow with users genuinely interested in this niche. Another strategy is to use shillers who will promote our project in other channels. Many investors ultimately rely more on user comments than paid promotions, so we will attract more cautious investors. We will engage them through activities like games and giveaways, and they will have the opportunity to participate in discussions and surveys to address their concerns about the project. It is essential that the community can freely express their opinions and contribute ideas. According to our study on the platform, the data indicates that 62% of cryptocurrency investors participate in Telegram groups, a significant number, emphasizing the crucial role of Telegram in our growth.

Discord

Discord is one of the foundational pillars in communication for blockchain-based projects. It provides a range of tools to keep the community engaged, such as creating channels with games and activities, news synchronization, automatic posting from other social media platforms, and AI integrations. It boasts a vast user base familiar with the crypto world, actively seeking these projects on Discord for investment opportunities. Therefore, it is an educated target audience that only requires solid foundations to move forward with investing.

The most effective growth strategy for expanding the Discord user base is through project promotion in other Discord groups related to blockchain or collaborating directly with other projects. However, in the case of chabit, collaborations will be limited to genuinely legitimate projects with a reputable track record.

Another method to channel users into the Discord server is by redirecting them from Telegram or X. Not everyone uses Discord, but it is essential to have a presence on this social platform since many of its users may not be on Telegram or X.

TikTok

TikTok has quickly become one of the leading social media platforms for sharing cryptocurrency-related content. Nowadays, it's unthinkable for a blockchain project not to have an account on this platform. It can be used effectively to promote content through videos, live streams, or collaborations with other TikTokers.

TikTok provides us with intuitive tools and an algorithm that readily connects users within the desired niche. It offers a highly engaging and entertaining interaction that captures users' attention.

TikTokers are currently indispensable for such projects because they provide a wealth of quick information, and their followers share their mindset, making it easy to connect with them.

The best way to grow TikTok is by collaborating with other TikTokers through videos discussing the project or via live sessions where conversations take place, and users can ask questions and even participate directly. After conducting an internal study on cryptocurrency content, it revealed that 78% of users find educational and interesting content about blockchain through TikTok. Therefore, it is essential to create a TikTok account where you can also obtain valuable information and news from the same niche, thanks to TikTok's algorithm, which is designed to show you potentially useful content.

Marketing ACTION

*"Quality means doing it right
when no one is looking."*

Paid Media

This advertising method serves to connect with a large volume of users quickly, even reaching points of interest outside the platforms themselves, where algorithms will ensure that we are shown to the right audience. It is vital to carry out and make ourselves visible beyond natural reach.

25% of online conversions come from social media advertising campaigns, a significant and necessary increase.

It is worth noting that content related to cryptocurrencies is subject to restrictions that significantly hinder its promotion. Therefore, we will need to use strategies that disguise certain aspects to prevent algorithms from penalizing or even canceling the advertisement.

High-Quality Content & SEO

It is crucial to have high-quality SEO for better organic and long-term positioning. Optimizing keywords and text helps us secure top positions. Ranking in the top spots presents a positive image of the project and the team's efforts, instilling trust in new users and making it easier for them to find us when searching for relevant terms.

Well-crafted valuable content will leave a positive first impression on new investors. A clear and concise explanation of the project instills enough confidence to keep them engaged. According to a study on companies that publish high-quality content, 45% of them significantly increase organic traffic within six months.

Influencers

In recent years, social media and human interactions have evolved, becoming increasingly digital to the point where social networks serve as the central hub for interpersonal communication.

As a result, individuals pay heed to others they follow on these platforms, and influencers and promoters wield significant persuasive power over their followers. Hence, it is essential to engage with these influencers if we wish to reach the masses and establish trust in our project through their endorsements.

The crypto world is renowned for its high level of speculation, with many users, if not all, attempting to profit from their investments. A substantial portion of them relies on information directly from influencers. According to the study conducted on cryptocurrency investors, 68% consider recommendations from trusted influencers when making investment decisions. Therefore, the selection of an influencer is of utmost importance, and it's crucial to have assessed their content and develop a comprehensive strategy with them to effectively promote the project.

Calls, Magazines & Shillers

Shillers play a pivotal role in our strategy as they disseminate project details across Discord groups, Telegram groups, comments on reputable social media profiles, and more. Finding high-quality shillers can be challenging, but when identified, they serve as a consistent source of high-quality users.

Advertising in digital magazines exposes us to an audience that may be interested in the project but not yet well-versed in new blockchain ventures. This approach attracts new users eager to get involved and learn about the project, thereby enhancing credibility and reputation. Advertising in magazines allows for more extended reading time and in-depth information, fostering a deeper connection with the brand and reaching a more selective audience.

Organic Growth

Acquiring an audience organically is a slow, labor-intensive process where results come gradually. However, the quality of users gained through this method ensures the best possible outcome. Our strategy on Discord and Telegram revolves around consistent posting and interaction with the community. Keeping them engaged through quizzes, games, and meaningful conversations is the most effective way to maintain their presence. On TikTok and Twitter, it's vital to maintain a continuous flow of information and posts to show that we are consistently sharing updates. Another essential factor is that the community itself generates and shares content, leading to organic growth and a continuous influx of new users on different platforms. For this reason, our focus is on maintaining a united and growing community by conducting regular AMAs and providing an opportunity for the entire community to voice uncertainties or questions arising from misinformation. Creating unity and trust in the project is of utmost importance. According to our study, 68% of users stated that they feel engaged when the community actively encourages participation, sparking discussions and opinions on various topics.

Exchanges

LISTINGS

*"Price is what you pay.
Value is what you get."*

Exchanges

From day one, our top priority has been continuous listing on centralized exchanges, which is where the majority of users and large capital reside. The residual issue with DEXs like PancakeSwap or Uniswap is that the price impact and liquidity parity make it challenging for large investors with substantial holdings to participate. Hence, our strategy is to prioritize this user profile to achieve exponential and long-term growth. The success of a crypto project is based on expansion, stability, and usability. Therefore, we must pursue listings as early as possible to maximize CB8's accessibility, exposure, and gain significant trading volumes that enable the development of chabit.

Tier 1 & Tier 2

We will focus our efforts on listing CB8 on exchanges with adequate trading volume and user bases. We have observed how many projects rush to list on smaller exchanges, only to find their tokens stagnant. Therefore, we will optimize our resources by first targeting tier 2 exchanges and gradually moving into tier 1 exchanges.

As a first step, we will list CB8 on Bitmart, a tier 2 exchange ranked among the top 25, which will provide us with an excellent user base and additional staking services.

Subsequently, we will list on one tier 1 exchange every one or two weeks, ensuring a steady increase in trading volume. These listings will be accompanied by our primary goal of aggressive and continuous marketing.

Development

RULE THEM ALL

*"Never invest in businesses
you cannot understand."*

CB8

– Total Supply: **88.000.000**

– Blockchain:

Binance Smart Chain, we chose to launch CB8 on this network due to its speed, low cost, extensive adoption, and ease of acquiring BNB. In the near future, CB8 will become multi-chain and develop its own blockchain.

– Distribution:

Airdrop presale & launch:

25,38% = ~22.350.000 CB8

Chabit Utility Reserve:

40% = 35.200.000 CB8

Marketing and Development:

20% = 17.600.000 CB8

Team:

10% = 8.800.000 CB8

Emergency reserve:

3,62% = 3.170.000 CB8

Platform Fees and Development:

1% = 880.000 CB8

CB8 Use Cases

CB8 will serve as the cornerstone of Chabit, as it will act as a bridge currency for exchanging cryptocurrencies with each other or with fiat, making it essential for the operation of all the utilities that Chabit will offer. CB8 holders will enjoy various benefits for being holders, including staking, access to exclusive services, and the ability to pay for services with significant discounts when using CB8 as a payment method.

Our vision is to stabilize trading volumes to achieve continuous growth until we fully develop the platform's utilities. CB8 will need to handle a substantial number of transactions.

It's important to note that CB8 will be a multi-platform token. It will initially run on the BSC network but will eventually be available on other networks such as Ethereum, Polygon, and will also have its own blockchain, a second layer based on the Stellar blockchain, ensuring nearly instant, low-cost transactions.

CB8 utilities

One of the cornerstones of our philosophy is to reward our community. Therefore, CB8 will offer various utilities to benefit from being a holder.

- **Staking:** From its launch on the first exchange, CB8 will provide the opportunity to earn yields through staking. The initial annual APY will be 44%, with the aim of maintaining this profitability for at least the first year after CB8's release. There may be adjustments in case of exponential increases in the token's price.
- **Benefits with CBGems:** Being a holder of a certain amount of CB8 tokens, combined with the ownership of a CBGem, will grant benefits such as an increase in the annual earnings from dividends generated by CBGems. This synergy will significantly boost passive income, and you can find further details in the CBGems earnings forecast section.
- **Advantage Program:** Additionally, having CB8 will provide advantages and discounts within Chabit, enabling you to save on purchases made through the application at stores, accumulate points, enter into giveaways, and much more...

Chabit NFTs

– Total supply:

1.186 CBGems

– Blockchain:

Polygon, We have chosen to use Polygon as the foundation for our NFTs due to its lower transaction fees compared to Ethereum, widespread adoption, and acceptance on most NFT marketplaces such as OpenSea. We have ruled out BSC precisely because it is not accepted on major platforms.

– Distribution:

Diamond:

8 units @ 100.000\$

Sapphire:

28 units @ 50.000\$

Ruby:

50 units @ 10.000\$

Emerald:

100 units @ 5.000\$

Amber:

1000 units @ 1.000\$

Total participation of the **12,5%**

CBGems Uses

CBGems are not your typical NFTs; they represent direct ownership stakes in chabit. This means you will receive direct returns in the form of dividends proportional to the profits generated by all activities within chabit. Imagine a passive income that you'll receive as long as you hold your CBGems.

In addition to this profitability, all NFTs will benefit from reduced platform fees for life, along with discounts on all events. It's important to note that chabit will regularly host massive events, so you can access them with special offers or even gain permanent free access by acquiring one of the Diamond or Sapphire category CBGems.

The prices set for CBGems will gradually increase every week to ensure that buyers secure guaranteed value appreciation. You can find profit projections in the forecasts section a few pages down.

Amber

- Quantity available: 1000 units
- Price: 1.000\$
- Performance Multiplier: 0.80X
- Privileges:
 - VIP Group Membership (Early information on new listings or launches)
 - 10% discount on usage fees at chabit for life (including trading, withdrawal, and deposit, bank-related fees are not included)
 - 10% discount on all events organized by chabit
 - Exclusive benefits with partners

Emerald

- Quantity available: 100 units
- Price: 5.000\$
- Performance Multiplier: 0.90X
- Privileges:
 - VIP Group Membership (Early information on new listings or launches)
 - Access to investment opportunities in the physical world
 - 30% discount on usage fees at chabit for life (including trading, withdrawal, and deposit, bank-related fees are not included)
 - 25% discount on all events organized by chabit
 - Exclusive benefits with partners

Ruby

- Quantity available: 50 units
- Price: 10.000\$
- Performance Multiplier: 1.00X
- Privileges:
 - VIP Group Membership (Early information on new listings or launches)
 - Access to investment opportunities in the physical world
 - 50% discount on usage fees at chabit for life (including trading, withdrawal, and deposit, bank-related fees are not included)
 - 50% discount on all events organized by chabit
 - Exclusive benefits with partners

Sapphire

- Quantity available: 28 units
- Price: 50.0000\$
- Performance Multiplier: 1.25X
- Privileges:
 - VIP Group Membership (Early information on new listings or launches)
 - Access to investment opportunities in the physical world
 - 100% discount on usage fees at chabit for life (including trading, withdrawal, and deposit, bank-related fees are not included)
 - 75% discount on all events organized by chabit
 - Exclusive benefits with partners

Diamond

- Quantity available: 8 units
- Price: 100.0000\$
- Performance Multiplier: 1.50X
- Privileges:
 - VIP Group Membership (Early information on new listings or launches)
 - Access to investment opportunities in the physical world
 - 100% discount on usage fees at chabit for life (including trading, withdrawal, and deposit, bank-related fees are not included)
 - 100% discount on all events organized by chabit
 - Exclusive benefits with partners

Projections

PERFORMANCE

"High expectations are the key to everything."

Economic Projections

In the following pages, we will focus on analyzing the returns obtained from commissions on a selection of exchanges from the top 100. Our goal is to project the estimated earnings for the Chabit exchange and the CB8 token. All calculations are based on publicly available data. Typically, blockchain companies, with very few exceptions, do not provide a lot of public information, so earnings must be calculated based on volume and commission relationships.

CBGems Profit Forecast

CBGems will provide annual earnings directly through dividends as company stakes in the form of NFTs. The total percentage allocated to the holders of the 1,188 CBGems is 12.5%. The proposed profit ranges have been selected conservatively, with the lowest calculated range falling within the top 80 to 100, and the most optimistic projection is less than half of the earnings reported by the top 2, Coinbase. If we were to project earnings based on Binance's earnings, the income could potentially multiply several times more than the most optimistic calculation shown. It's essential to consider that the data presented is purely derived from trading commissions, and a portion of the earnings is generated from deposits and withdrawals, especially those made via card transactions,

Exchanges have numerous additional revenue sources, such as listing coins that are not included in the tables, which could significantly increase the figures. It's worth considering that chabit's innovative proposal could undoubtedly set a precedent for reaching the top positions.

In the following table, you will find a projection that reflects chabit's potential earnings (annual amounts) in the first column on the left. The top row details the various categories of CBGems. Within each category, earnings in dollars and the percentage relative to the cost of each NFT are listed. Remember that being a holder of CB8 with specific quantities, along with owning CBGems, will provide even greater returns.

CBGems Profit Projection

Chabit Annual Earnings	Diamond		Sapphire		Ruby		Emerald		Amber	
	Profit	Profit %	Profit	Profit %	Profit	Profit %	Profit	Profit %	Profit	Profit %

CBGems & CB8 Synergies

<p>There is a minimum amount of CB8 tokens required to start earning an increase in the annual yield of CBGems. This quantity depends on the category, always maintaining a ratio related to the acquisition value of each CBGem.</p> <p>The yellow-colored columns represent the minimum amount of CB8 you need, and these are the only available ranges. For instance, if you have a Diamond category CBGem and own 195,000 CB8, you would enjoy a 5% yield. To move up to the 10% tier, you would need an additional 5,000 CB8.</p> <p>The orange columns show the percentage of gain that should be added to the chart on the previous page. We provide a sample calculation in the table on the next page.</p>	Diamond		Sapphire		Ruby		Emerald		Amber	
	Minimum CB8 Quantity	CBGem Yield Increase	Minimum CB8 Quantity	CBGem Yield Increase	Minimum CB8 Quantity	CBGem Yield Increase	Minimum CB8 Quantity	CBGem Yield Increase	Minimum CB8 Quantity	CBGem Yield Increase
	100.000	5 %	55.000	5 %	15.000	5 %	8.000	5 %	2.000	5 %
	200.000	10 %	110.000	10 %	30.000	10 %	16.000	10 %	4.000	10 %
	400.000	20 %	220.000	20 %	60.000	20 %	32.000	20 %	8.000	20 %

Example of CBGems & CB8 Synergy Earnings

<p>In the example shown in this table, we have used an annual profit of \$50 million for Chabit as a reference, as seen in previous sections and based on results from other exchanges, this profit is a very conservative estimate. It is, however, sufficient to illustrate the increase in yield from holding CB8 and CBGems in synergy. We have chosen Diamond as the highest-yielding option and Emerald as an intermediate solution.</p> <p>The columns specify from left to right: the minimum quantity needed for synergy, the percentage increase, earnings before synergy in USD, and earnings after synergy.</p>	Diamond				Emerald

CB8 Earnings Forecast: Volume

CB8 is the central pillar of Chabit and will be used for the majority of platform functionalities. Therefore, we will focus on its long-term growth. Forty percent of the tokens will be reserved for platform use and will not be utilized until the platform is operational. The 20% allocated for marketing and development will be the percentage from which earnings are derived to support the maintenance of CB8, exchange listings, marketing efforts, and team maintenance. The emergency reserve will be used exclusively in case of financial needs when an insufficient amount of tokens has been released from the vesting of those designated for marketing and development. We will establish estimated daily returns based on trading volume, not the token's value, to prevent sales from negatively affecting its price.

In the following table, we have calculated an approximate achievable price for CB8 based on the average market capitalization of tokens listed on the exposed exchanges. We have correlated the percentage of daily volume with their market capitalization, the daily volume, and a 0.5% return on this volume, an adjusted amount that would not negatively impact the stability of CB8.

The final data shows estimated daily, monthly, and annual earnings based on only a partial sale of 0.5% of the volume. In the last column, we have recorded the projected growth percentage on the listing price of \$0.044.

Profit Forecast CB8 Escrow

Comparing the growth of tokens from the mentioned exchanges, 3 years of growth are sufficient to see significant development in the price and capitalization of CB8. It should be noted that the token is being launched just on the verge of a Bull Market, so we can ride the market's growth and accelerate the process. Monthly scheduled sales of 1.5% of the total CB8 tokens reserved for Marketing and Development, from the 20% of the total supply, will be conducted. The sale will be divided, completed, or postponed based on the token's situation. Our goal is to sustain the project and minimize the impact on the price. The table below shows the estimated profits based on the proposed release.

Chabit Profit Forecast

In the following section, we will provide estimates of the income earned by some of the exchanges ranked in the top 50. These estimates are based solely on trading fees and deposits and withdrawals to fiat currency using the card payment method. As mentioned earlier, exchanges have additional sources of income, such as listing new tokens on their platform with associated fees or the marketing services they offer. However, due to the lack of publicly available data, any projections related to these sources of income would be calculated arbitrarily and would not be meaningful. The only thing we can consider is that the estimates presented in the following chart would increase significantly, making the numbers even more attractive.

Chabit Earnings Forecast

In the table below, you can find daily trading volume data, and by averaging the fees for each exchange, we can extrapolate this volume to estimate the average earnings generated solely from traditional buy and sell transactions. Additionally, we have included the fees that each platform charges for processing payments and withdrawals using debit or credit cards. Assuming, based on statistics, that at least 0.5% of the volume is processed through this payment method, we extrapolate the potential earnings from these fees. The annual earnings of the selected exchanges are the result of summing both of these benefits.

Exchange	User base	Daily volume	Minimum Trading Fee	Maximum Trading Fee	Average Trading Fees	Card Purchase Fee	Card Withdrawal Fee	Daily Trading Profit	Monthly Trading Profit	Annual Trading Profit	Volume Percentage Processed with Cards: 0.5%	Card Fees Earned Daily	Card Fees Earned Monthly	Card Fees Earned Annually	Annual Earnings from Trading and Fees

These performance estimates are based on publicly available data, and the assumption of 0.5% of the volume being attributed to credit card transactions is considered conservative. It's important to note that there are other factors to consider when accounting for an exchange's profits, such as P2P trading fees, project listing fees, and services like pre-sale launchpads. The data presented here provides an overview of the potential earnings.

THANKS

"We extend our heartfelt thanks to the entire community. It's you who are making this project possible, and we are proud to be part of the Chabit revolution alongside you. We hope you have enjoyed all the information we've shared about what we are going to create. We wish for you to embrace our vision and share our passion for changing the world, as Chabit is a project born by and for all of you."
